

“Foam Suppressant”

foam-away

foam-away

foam-away

Is recommended for the control of excessive foaming in water.

Directions: Before products have been added to water add 1 to 2 ounces per 100 gallons of water. This method will prevent foaming.  
(Best method)

When foaming is created during filling or agitation add 1 to 2 ounces per 100 gallons of solution. This method will knock down existing foam after a few minutes.

Shake well before use.

Prevent from freezing.

**Keep out of reach of children.**
