Digital Ecosystem

Summary

What Do We Mean By Smart?

Today's Dumb Reality

Fragmented data from multiple sources in the ecosystem that lacks data consistency.

Data has limited value outside the silo

Tomorrow's Smart Objective

Consistent data that allows aggregation, administration and analytics of data across industry segments, public or private, domestic or international.

Data is very valuable outside any silo

Smart Meter

An individual digital meter that tracks and distributes energy consumption and provides a data report to stakeholders

Smart Grid

A digital electrical distribution structure that integrates data for energy supply and demand management.

Smart Contract

A digital contract that integrates construction activity data to execution of contract obligations, like progress payments at predetermined benchmarks.

Smart Project

A project where all the contractors and stakeholders are aligned with a digital ecosystem that covers every contract for the entire project.

Smart Infrastructure

A digital distribution structure that integrates data for building and operating all types of infrastructure, from general construction of roads and buildings to agriculture.

Smart Cities

A digital distribution structure that integrates data for all types of physical assets in a community to streamline operations, align public and private data, increase efficiency and improve the quality of life.

Smart Meter

An individual digital meter that tracks and distributes energy consumption and provides a data report to stakeholders

Requires consistent data elements by all participating shareholders

Smart Grid

A digital electrical distribution structure that integrates data for energy supply and demand management.

Requires consistent data elements by all participating shareholders

Smart Contract

A digital contract that integrates construction activity data to execution of contract obligations, like progress payments at predetermined benchmarks.

Requires consistent data elements by all participating shareholders

Smart Project

A project where all the contractors and stakeholders are aligned with a digital ecosystem that covers every contract for the entire project.

Requires consistent data elements by all participating shareholders

Smart Infrastructure

A digital distribution structure that integrates data for building and operating all types of infrastructure, from general construction of roads and buildings to agriculture.

Requires consistent data elements by all participating shareholders

Smart Cities

A digital distribution structure that integrates data for all types of physical assets in a community to streamline operations, align public and private data, increase efficiency and improve the quality of life.

Requires consistent data elements by all participating shareholders

Digital Ecosystems utilize consistent data elements *to enable the Smart in Smart*

 Preventing Outages and Enhancing the Resilience of the Electric Grid

DATA Act 2.0

CONTROL NUMBER: 1167-1552

CSUC / XBRL-CET / SGIP PAP25 - University Interoperability Research Facility
 Buildings University Innovators And Leaders Development DE - FOA - 0001167

Topic Area Number : DE-FOA-0001167
 Project Title : **University Interoperability Research Facility.**

- Big Energy and Small Business
- Examining the Potential of Interoperability for building the Nation's Energy Infrastructure and Energy Efficient Buildings by "knitting together" various data standards.

Lead Organization : California State University Chico
 Supported by XBRL-CET and SGIP PAP25

Organization Type : Consortium
 Principal Investigator : Surety Resource Connection, Inc.
 Team Members and Key Participants : XBRL US, SGIP, PwC, Intuit, GALLINA, Solar Nexus (IEP XML) [Abbreviation Guide](#)

Anticipated Project Budget

| Component | DOE | Consortium | Total |
|--|-------------|------------|-------------|
| SGIP PAP25 and XBRL-CET alignment with BEDES | \$200,000 | \$50,000 | \$250,000 |
| IEP XML Alignment with BEDES, XBRL and SGIP | \$200,000 | \$50,000 | \$250,000 |
| ageXML Alignment with BEDES, XBRL and SGIP | \$200,000 | \$50,000 | \$250,000 |
| NASBP/SFAA alignment with BEDES, XBRL SGIP | \$200,000 | \$50,000 | \$250,000 |
| Manufacturing with BAPVC, BEDES, XBRL, SGIP | \$200,000 | \$50,000 | \$250,000 |
| | \$1,000,000 | \$250,000 | \$1,250,000 |

Abstract
 DOE funded [Smart Grid Interoperability Panel](#), [Energy Star](#), [Grid Exchange Specification](#), [NASEO](#) and [IEP XML](#) with the "knitting together" data standards for interoperability. Potential construction/financial services [collaborate](#), supported by a [university based sustainable Interoperability R&D Facility](#), which is the premise of this DOE-FOA response by [CSUC](#) and [XBRL-CET/SGIP-PAP25](#).

[SGIP-Priority Action Plan 25](#), is a [collaboration](#) with [XBRL US](#) to extend the public [FASB USGAAP taxonomy](#) to include [energy specific data fields](#), particularly for building the nation's energy infrastructure, streamlining the interconnection process and enabling [DATA Act compliance](#) for energy related projects that have federal funding.

Data standardization enables interoperability across disparate systems and will enable [better quality data](#), [data analytics](#), mandated reporting compliance, investment analysis, significant cost savings and improved access to capital and financial services for all stakeholders, [including small business](#).

This CSUC/XBRL-CET/SGIP-PAP25 will explore how current DOE efforts like BEDES can "knot together" the [BEDES Dictionary](#), [IEPXML](#), [NASEO data matrix](#) and the proposed [XBRL-CET Data sets](#) to align with the objectives of the DOE to promote more efficiency in energy development, help [small business](#), and create a financially sustainable university based Interoperability R&D Facility.

2014 DATA Act

Public Law 113–101
113th Congress

An Act

May 9, 2014
[S. 994]

To expand the Federal Funding Accountability and Transparency Act of 2006 to increase accountability and transparency in Federal spending, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the “Digital Accountability and Transparency Act of 2014” or the “DATA Act”.

Digital
Accountability
and
Transparency Act
of 2014.
31 USC 6101
note.

SEC. 2. PURPOSES.

The purposes of this Act are to—

(1) expand the Federal Funding Accountability and Transparency Act of 2006 (31 U.S.C. 6101 note) by disclosing direct Federal agency expenditures and linking Federal contract, loan, and grant spending information to programs of Federal agencies to enable taxpayers and policy makers to track Federal spending more effectively;

(2) establish Government-wide data standards for financial data and provide consistent, reliable, and searchable Government-wide spending data that is displayed accurately for taxpayers and policy makers on USASpending.gov (or a successor system that displays the data);

(3) simplify reporting for entities receiving Federal funds by streamlining reporting requirements and reducing compliance costs while improving transparency;

(4) improve the quality of data submitted to USASpending.gov by holding Federal agencies accountable for the completeness and accuracy of the data submitted; and

(5) apply approaches developed by the Recovery Accountability and Transparency Board to spending across the Federal Government.

The Blue Button represents a national movement that enables consumers to have easy access to their own health information in a format that they can use.

The Blue Button logo signifies that a consumer can download a single electronic file that contains their available health data.

[Website](#)

The Green Button provides utility customers with easy and secure access to their energy usage information in a consumer-friendly and computer-friendly format.

Customers are able to securely download their own detailed energy usage with a simple click of a literal "Green Button" on electric utilities' websites.

[Website](#)

Orange Button targets a reduction in soft costs by streamlining the collection, security, management, exchange, and monetizing of solar datasets across the value chain of solar.

Creating an industry-driven standardized data landscape will facilitate the growth and expansion of distributed solar.

[Website](#)

The Orange Button Initiative started as a public/private partnership funded by the [U.S. Department of Energy, the SunSpec Alliance and more than 350 companies that contributed to its development.](#)

Orange Button leverages the idea that solar companies will share data with each other to reduce friction and achieve operational efficiency.

The [SunSpec Alliance](#) is the original the developer of the technology and the licensee of the Orange Button trademark.

Open Source For Distributed Energy

Orange Button is a data exchange standard and open source community for the solar+energy storage industry. It enables free data exchange between systems used in the asset lifecycle to decrease costs and drive innovation.

Orange Button is sponsored by the [SunSpec Alliance](#) and supported by developers like you.

Community Resources

[Join the work group](#) on Tuesdays

[Generate data models](#) and define terms

[Leverage open source](#) and make contributions

[Join the conversation](#)

Developer Benefits

- Ready-to-use taxonomy and data models, 1,000's of defined terms for operational use cases
- Easy to adopt Apache 2.0 license
- Active work group that meets weekly
- Reference apps that show how its done
- Harmonization with international standards including IEEE, IEC, SAE, and SunSpec

Showcase

Orange Button AHJ Registry

[AHJ Registry](#) is a web app and API, based on Orange Button, that identifies Authority Having Jurisdiction by inputting an address or lat/long of future solar installation. Published by SunSpec Alliance.

SolarAPP+

[SolarAPP+](#) reduces install times, reduces project cancellations, and expands access to renewable energy. It utilizes Orange Button information models and integrates AHJ Registry. Published by NREL.

Blu Banyan SolarSuccess

[SolarSuccess](#) software is a cloud ERP, CRM, and project management system for the solar industry. It utilizes Orange Button data models and API, and AHJ Registry, to streamline customer integrations.

Orange Button Product Registry

The [Product Registry](#) is a web app and API, based on Orange Button, that identifies solar and storage product SKUs and provides a set of standardized data elements about these products. Published by SunSpec Alliance and available in open source. [Read more](#)

SBA Procedural Notice

SUBJECT: Option for Prior Approval Sureties to Submit the “Work in Process” Information Required by SBA Form 994F through eXtensible Business Reporting Language (XBRL)

TO: All SBA Employees and SBA Prior Approval Surety Partners
SUBJECT: Option for Prior Approval Sureties to Submit the “Work in Process” Information Required by SBA Form 994F through eXtensible Business Reporting Language (XBRL)

CONTROL NO.: 5000-834330

EFFECTIVE: June 29, 2022

The purpose of this Notice is to inform Prior Approval Surety Companies and their Surety Agents participating in SBA’s Surety Bond Guarantee (SBG) Program (referred to collectively hereafter as Surety Partners) and SBA employees that, effective immediately, Surety Partners and small business concerns will have the option to submit the information required by SBA Form 994F, “Schedule of Work in Process”, through eXtensible Business Reporting Language (XBRL) (referred to as XBRL WIP reports). Under the current process, small business concerns provide the “Work in Process” (WIP) information to Surety Partners, and then Surety Partners must manually enter individual WIP information into CAFS. With XBRL WIP reports, Surety Partners will have the option to send a batch transmittal of the WIP information to CAFS electronically. SBA is issuing this Notice to provide Surety Partners with procedures to properly submit XBRL WIP reports through the Capital Access Financial System (CAFS).

What is XBRL?

XBRL is an open technology standard that enables business and financial data electronic communication. XBRL-formatted documents create computer-readable data and enable greater efficiency, improved accuracy, reliability, and cost savings to those who supply and use financial and business data.

The XBRL WIP report is an alternative to manual CAFS entry of SBA Form 994F information. All the information contained in the XBRL WIP report is identical to the information contained in the current SBA Form 994F; the only difference between the two forms is the formatting. The XBRL WIP report functions as a computer-readable spreadsheet specifically designed to be translated by CAFS. By using the XBRL WIP report, a Surety Partner will not need to manually enter the information into CAFS.

How are XBRL WIP reports submitted?

To submit the required WIP information through XBRL, a Surety Partner will need to perform the following sequence of steps:

SBA XBRL WIP Instructions

SBA authorized partners can prepare an XBRL-formatted Work-in-Process (WIP) report for SBG Program clients and submit it to SBA. Users can convert a WIP report into XBRL format, then upload it to the SBA eApps system (Option 1) or upload an existing XBRL formatted WIP to the SBA eApps system from a saved file on their computer (Option 2).

Option 1. Convert WIP from Excel to XBRL & Submit to SBA

Follow these steps to submit a WIP schedule to SBA when starting with a WIP in Excel format.

Step 1. Prepare the WIP SBA Spreadsheet Template

Visit <https://sba.xbrl.us/> and download the **WIP SBA Spreadsheet Template** using the blue button at the top of the page.

Download the WIP SBA Spreadsheet Template
 Go to SBA to Check your WIP

Choose a File

Select File:

Choose File No file chosen

clear

Selected file cleared.

Create a new WIP Schedule

Prepare a new WIP SBA Spreadsheet Template for any client following these steps. If updating a previously submitted WIP SBA Spreadsheet, see the section below on [Updating a previously submitted WIP.](#)

- Enter or cut & paste information from an Excel WIP schedule into the WIP SBA Spreadsheet Template. Complete columns B - J as highlighted in the figure below.
 - All fields are mandatory except *Bond Number* and *Total Billed to Date Including Retainages*.

2023 Financial Transparency Act

Public Law 117–263
117th Congress

An Act

To authorize appropriations for fiscal year 2023 for military activities of the Department of Defense, for military construction, and for defense activities of the Department of Energy, to prescribe military personnel strengths for such fiscal year, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

(a) IN GENERAL.—This Act may be cited as the “James M. Inhofe National Defense Authorization Act for Fiscal Year 2023”.

(b) REFERENCES.—Any reference in this or any other Act to the “National Defense Authorization Act for Fiscal Year 2023” shall be deemed to be a reference to the “James M. Inhofe National Defense Authorization Act for Fiscal Year 2023”.

TITLE LVIII--FINANCIAL DATA TRANSPARENCY

Sec. 5801. Short title.

Subtitle A--Data Standards for Covered Agencies; Department of the Treasury Rulemaking

Sec. 5811. Data standards.

Sec. 5812. Open data publication by the Department of the Treasury.

Data Standards.--

1) Common identifiers; quality.--The data standards established in the final rules promulgated under subsection (b)(2) shall—

A) include common identifiers for collections of information reported to covered agencies or collected on behalf of the Council, which shall include a common nonproprietary legal entity identifier that is available under an open license for all entities required to report to covered agencies; and

(B) to the extent practicable--

(i) render data fully searchable and machine-readable.

(ii) enable high quality data through schemas, with accompanying metadata documented in machine-readable taxonomy or ontology models, which clearly define the semantic meaning of the data, as defined by the underlying regulatory information collection requirements;

(iii) ensure that a data element or data asset that exists to satisfy an underlying regulatory information collection requirement be consistently identified as such in associated machine-readable metadata;

(iv) be nonproprietary or made available under an open license;

(v) incorporate standards developed and maintained by voluntary consensus standards bodies; and

(vi) use, be consistent with, and implement applicable accounting and reporting principles.

Infrastructure Investment and Jobs Act (IIJA)

Public Law 117–58
117th Congress

An Act

To authorize funds for Federal-aid highways, highway safety programs, and transit programs, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) **SHORT TITLE.**—This Act may be cited as the “Infrastructure Investment and Jobs Act”.

“(5) **ACCELERATED IMPLEMENTATION AND DEPLOYMENT OF ADVANCED DIGITAL CONSTRUCTION MANAGEMENT SYSTEMS.**—

“(A) **IN GENERAL.**—The Secretary shall establish and implement a program under the technology and innovation deployment program established under paragraph (1) to promote, implement, deploy, demonstrate, showcase, support, and document the application of advanced digital construction management systems, practices, performance, and benefits.

“(B) **GOALS.**—The goals of the accelerated implementation and deployment of advanced digital construction management systems program established under subparagraph (A) shall include—

“(i) accelerated State adoption of advanced digital construction management systems applied throughout the construction lifecycle (including through the design and engineering, construction, and operations phases) that—

“(I) maximize interoperability with other systems, products, tools, or applications;

“(II) boost productivity;

“(III) manage complexity;

“(IV) reduce project delays and cost overruns;

and

“(V) enhance safety and quality;

“(ii) more timely and productive information-sharing among stakeholders through reduced reliance on paper to manage construction processes and deliverables such as blueprints, design drawings,

Digital Ecosystem

Summary

Unless we act now, the 2030 Agenda will become an epitaph for a world that might have been.

António Guterres
Secretary-General, United Nations

The Americas Business Dialogue (ABD) is one of the most important private-sector initiatives in the Western Hemisphere.

It represents companies and business organizations from all sectors of the economy and all countries in the Americas.

UNITE. ACT. DELIVER.

We are at a halfway point. It has been 7 years since Paris, with 7 years to go to 2030.

We must respond to the facts. We need to reduce emissions by 43% by 2030 and course correct on adaptation, finance, and loss and damage.

We will deliver a transformational COP of action.

A COP for all.

UN Sustainable Development Goals

2 - End hunger, achieve food security and improved nutrition and promote sustainable agriculture

7 - Affordable and Clean Energy

- Reduce the administrative costs of permitting and construction
- Increase risk management capabilities to reduce exposure to lenders for better terms.

9 - Industry, Innovation and Infrastructure

- Accelerate the implementation of digital construction management systems, public and private.
- Model utilizes open standards so software developers have no constraints, trademarks or exclusivity to implement data exchange.

11 - Sustainable Cities and Communities

- Model Digital Ecosystem can be easily replicated without changing software platforms.
- SoalrApp is ready to be implemented to help reduce administrative costs and speed up timelines for permitting solar projects

12 - Responsible Consumption and Production

- The demand for energy will put pressure on generation and meeting demand will be a challenge. Enabling the production of clean energy to be more efficient so clean energy can be price competitive to fossil fuels will drive responsible consumption and production.

13 - Climate Action

- Accelerating the construction of all clean energy infrastructure projects that connect to the smart grid is direct climate action.

17 - Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development

- Expansion of the internationally recognized XBRL Taxonomy for infrastructure related data elements will promote and enable global partnerships.
- Engagement with the California-China Climate Institute and XBRL for China financial markets

Data Ecosystem - Hierarchy of Data

Formal XBRL extensions

The screenshots illustrate the structure of XBRL US taxonomies. Key elements include:

- Orange Button Taxonomy:** Developed as part of the U.S. Department of Energy Solar Energy Technologies Office-funded Orange Button™ program, aiming to aggregate and share solar data.
- Contractor Financials Taxonomy:** Developed by the XBRL US Surety Working Group to capture income statement and balance sheet information about contractors.
- FinTech:** Focuses on automating financial services, creating efficiencies and reducing costs.
- Solar:** Developed in partnership with the SunSpec Alliance and the solar industry to create a candidate release of the Orange Button Taxonomy 1.2.
- 2016 Surety Work in Process Taxonomy:** Contains concepts for Contractors to prepare Work in Process reports to submit to Surety insurance companies.
- Surety:** Provides a framework for contractors to identify risks and determine eligibility for surety bonds.

Examples of Data Elements

Legal Entity Identifier (LEI)

The Legal Entity Identifier (LEI) is a 20-character, alpha-numeric code based on the ISO 17442 standard developed by the International Organization for Standardization (ISO).

System for Award Management (SAM)

Entities doing business with the federal government use the Unique Entity ID created in SAM.

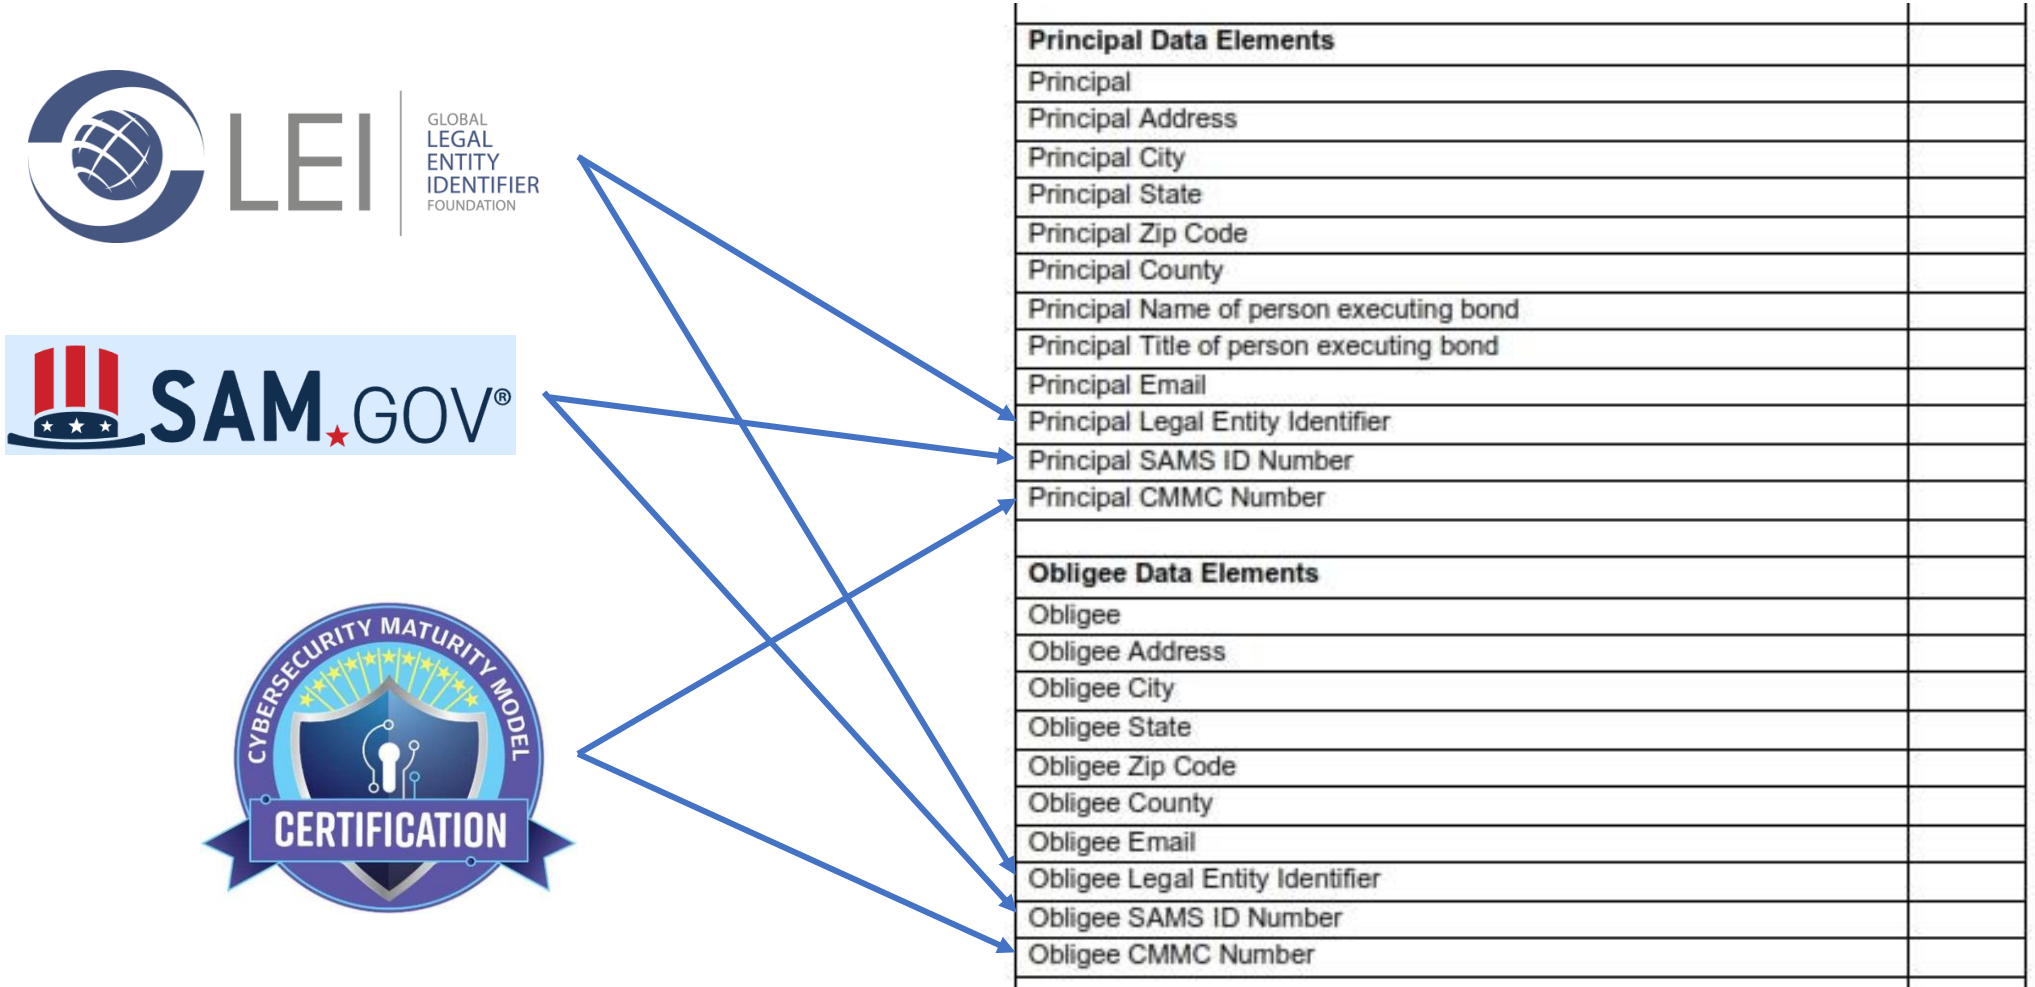

The Integrated Award Environment (IAE) manages several systems including SAM.gov, FPDS, eSRS, FSRS, CPARS and FAPIIS.

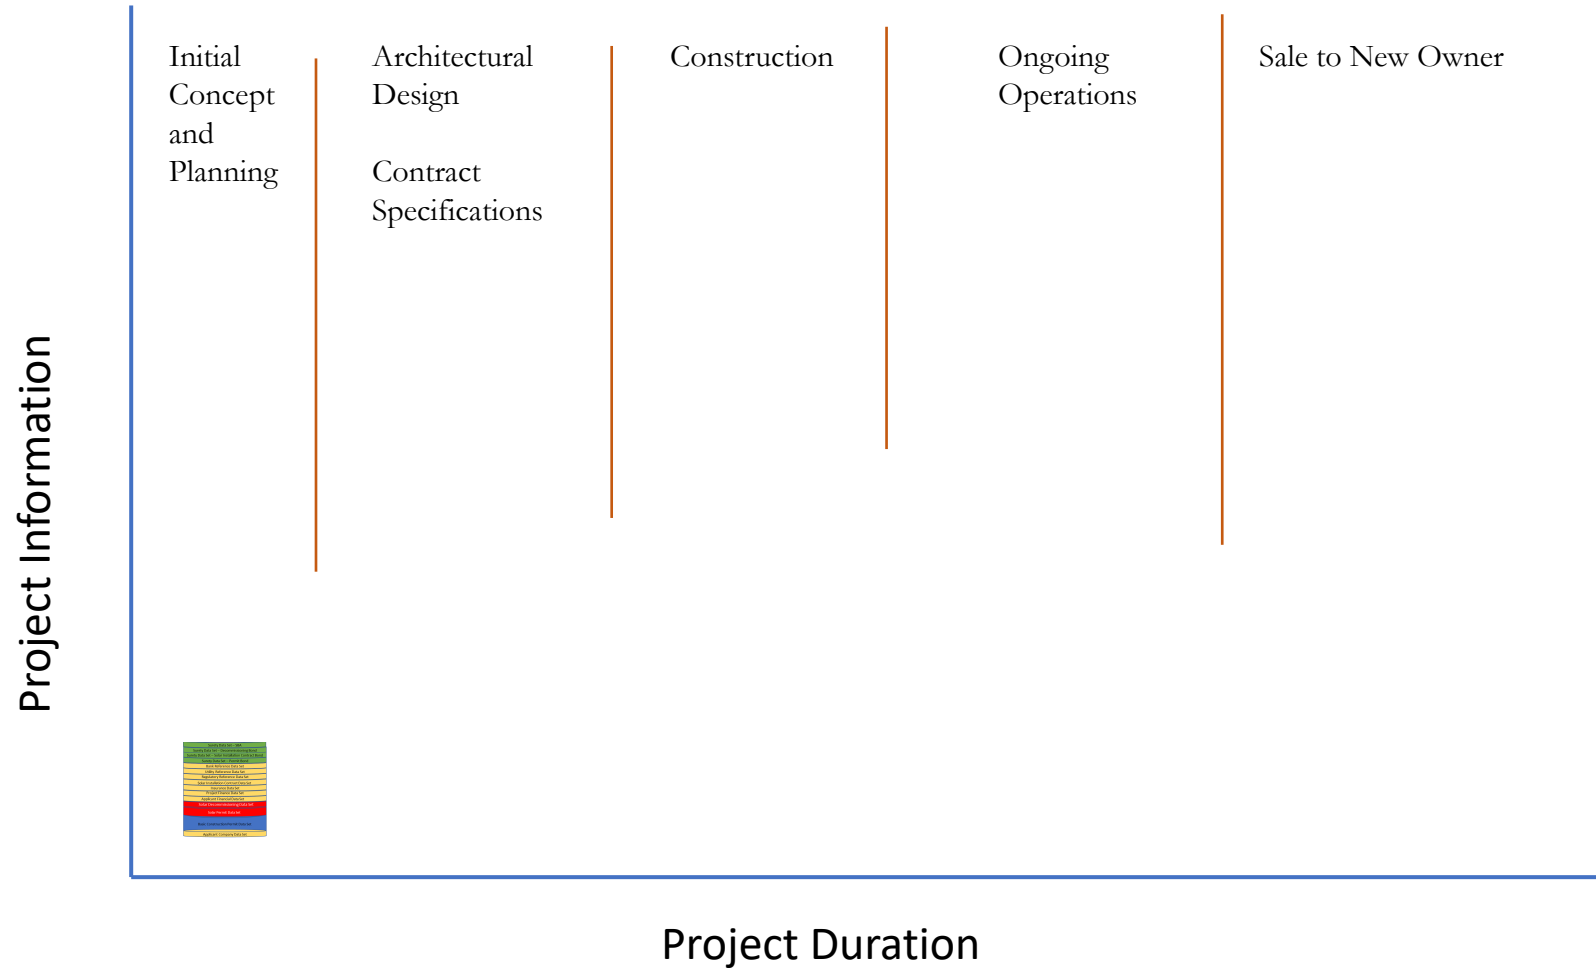

Cybersecurity Maturity Model Certification (CMMC)

The Cybersecurity Maturity Model Certification (CMMC) program is aligned to DoD's information security requirements for Defense Industrial Base partners.

Mapping the construction technology ecosystem

McKinsey analyzed the growing construction technology landscape to look for trends and constellations of activity around established and emerging use cases. Thicker lines connecting two use cases indicate a greater number of technology companies offering both technologies simultaneously. Click on a use case/technology to view its related solutions. Use the zoom options and weight slider to explore the relationships between different technologies. To isolate technologies by functional cluster or constellation, click to highlight or select the option to filter. Zoom / unfilter by clicking the same option again or the white space.

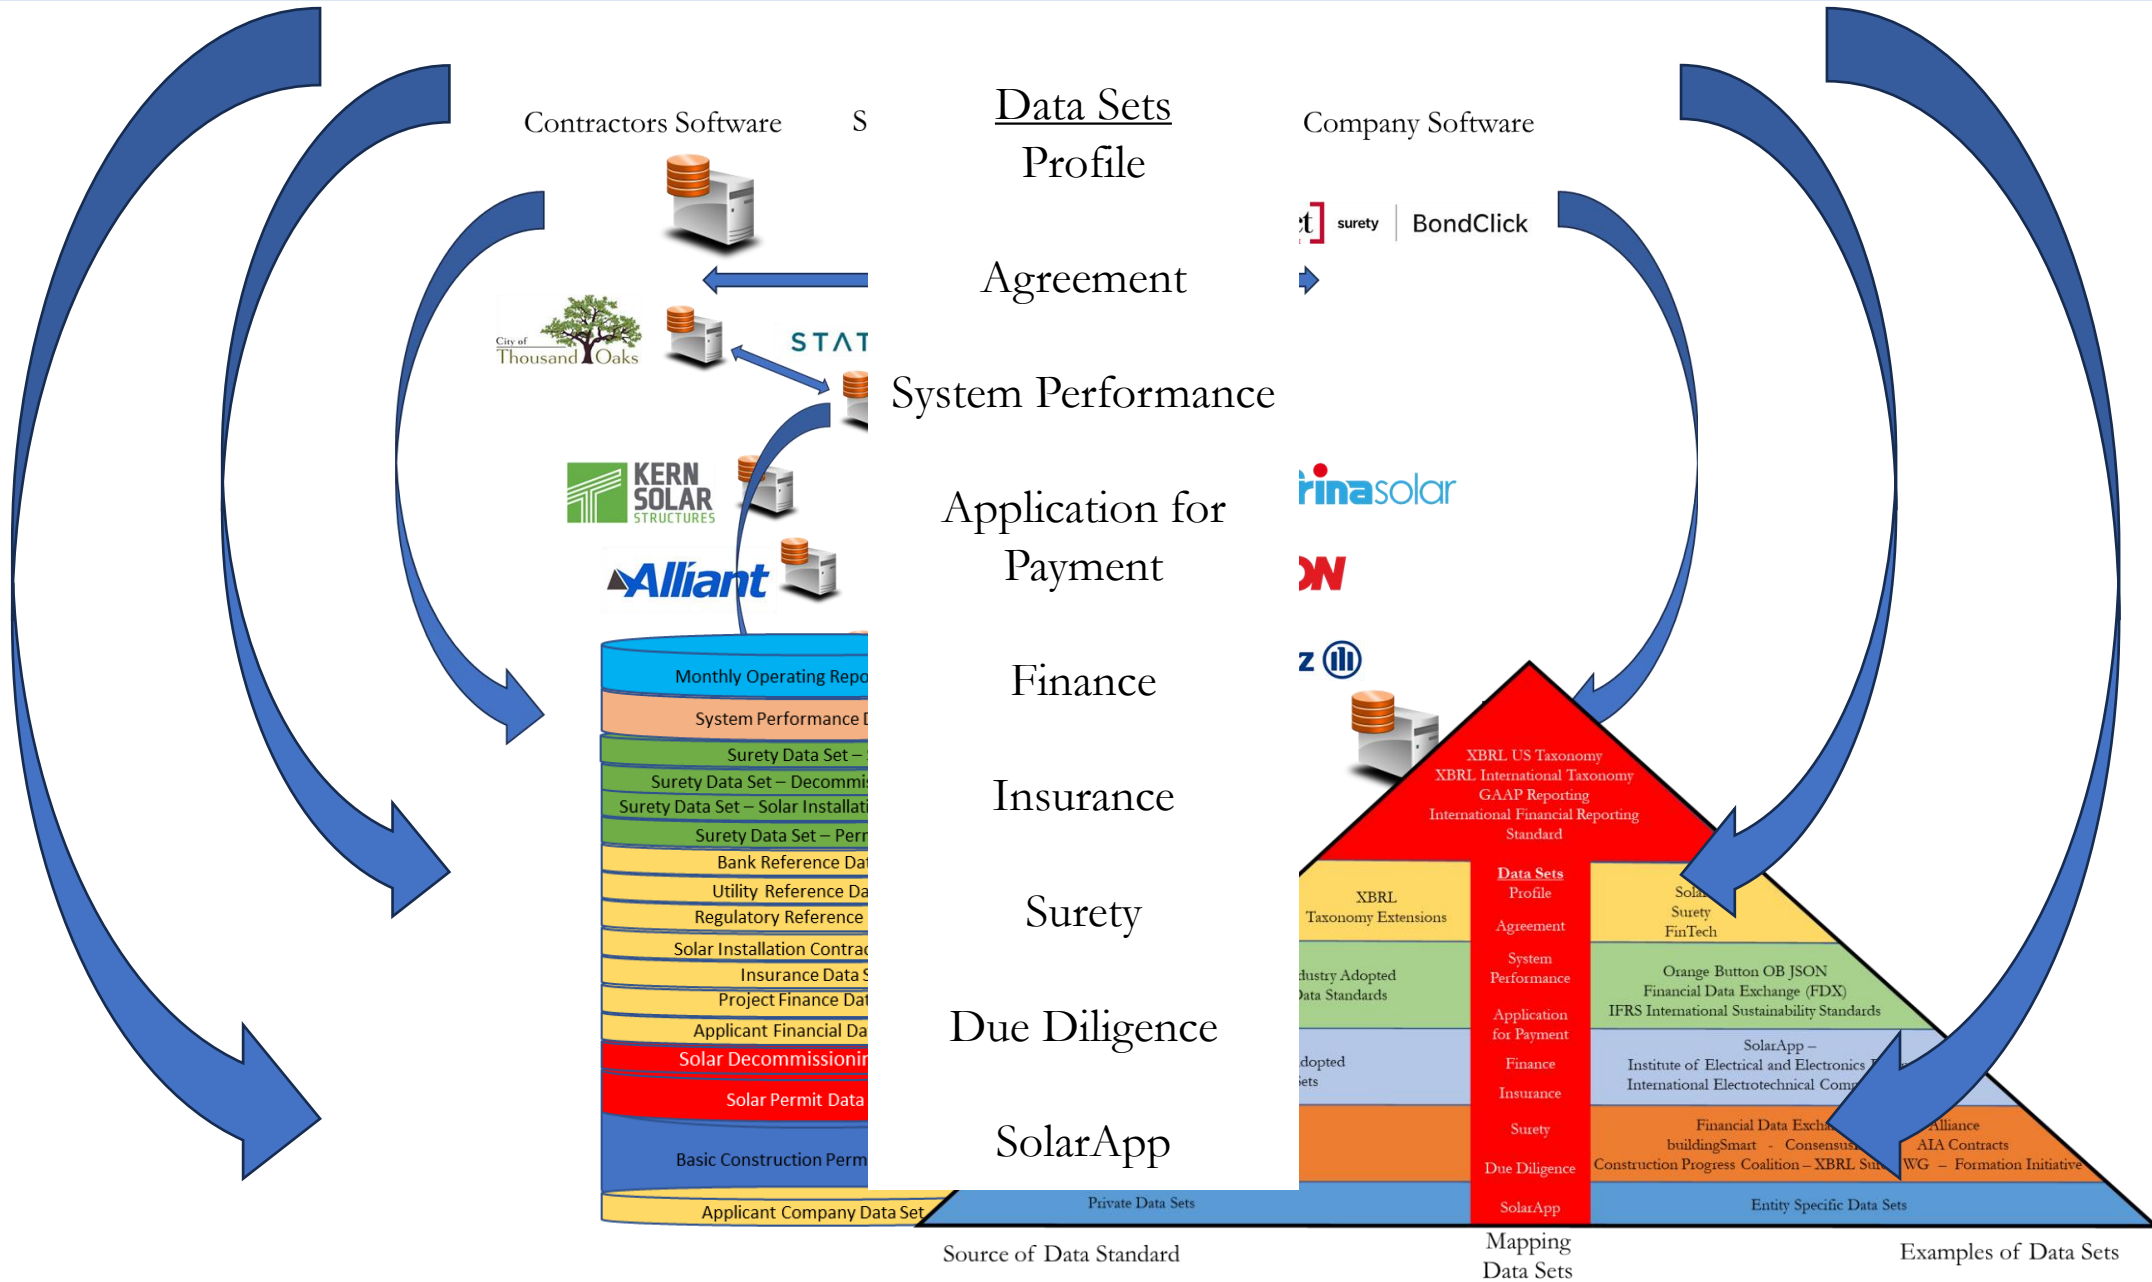

Sources: McKinsey Startup and Investment Landscape Analytics, PitchBook, Capital IQ. Data as of Q2 2018. Number of companies per use case includes all companies that provide that technology, even if it is not their primary offering. For more on this research, see our article: ["Seizing opportunity in today's construction technology ecosystem"](#)
