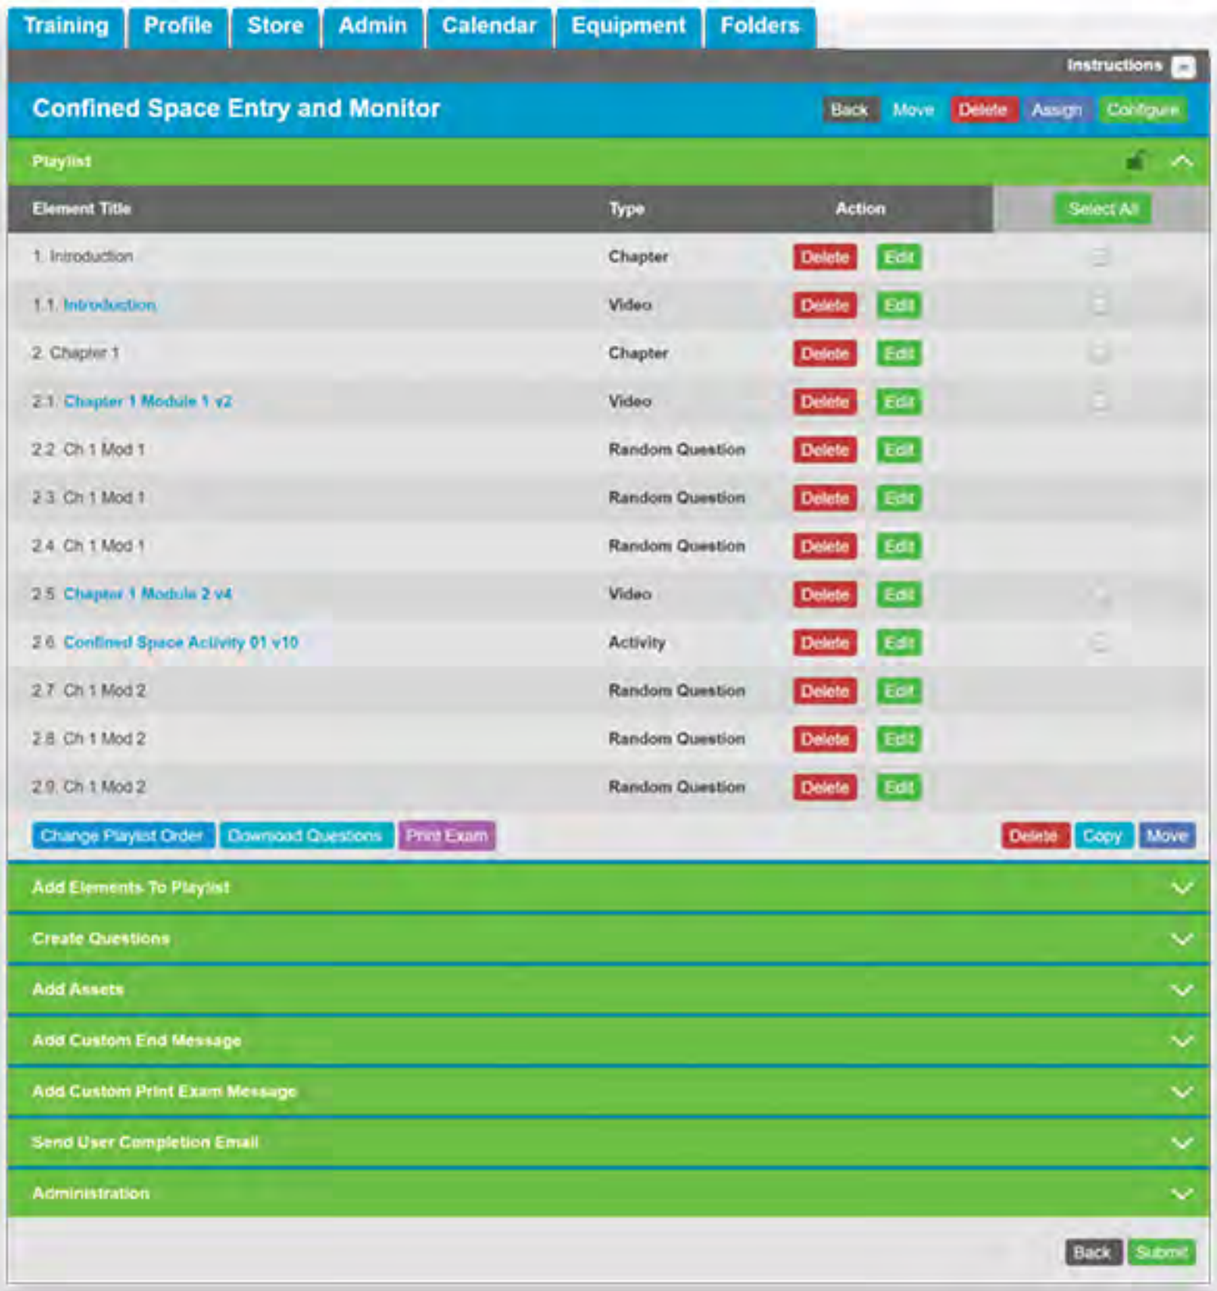
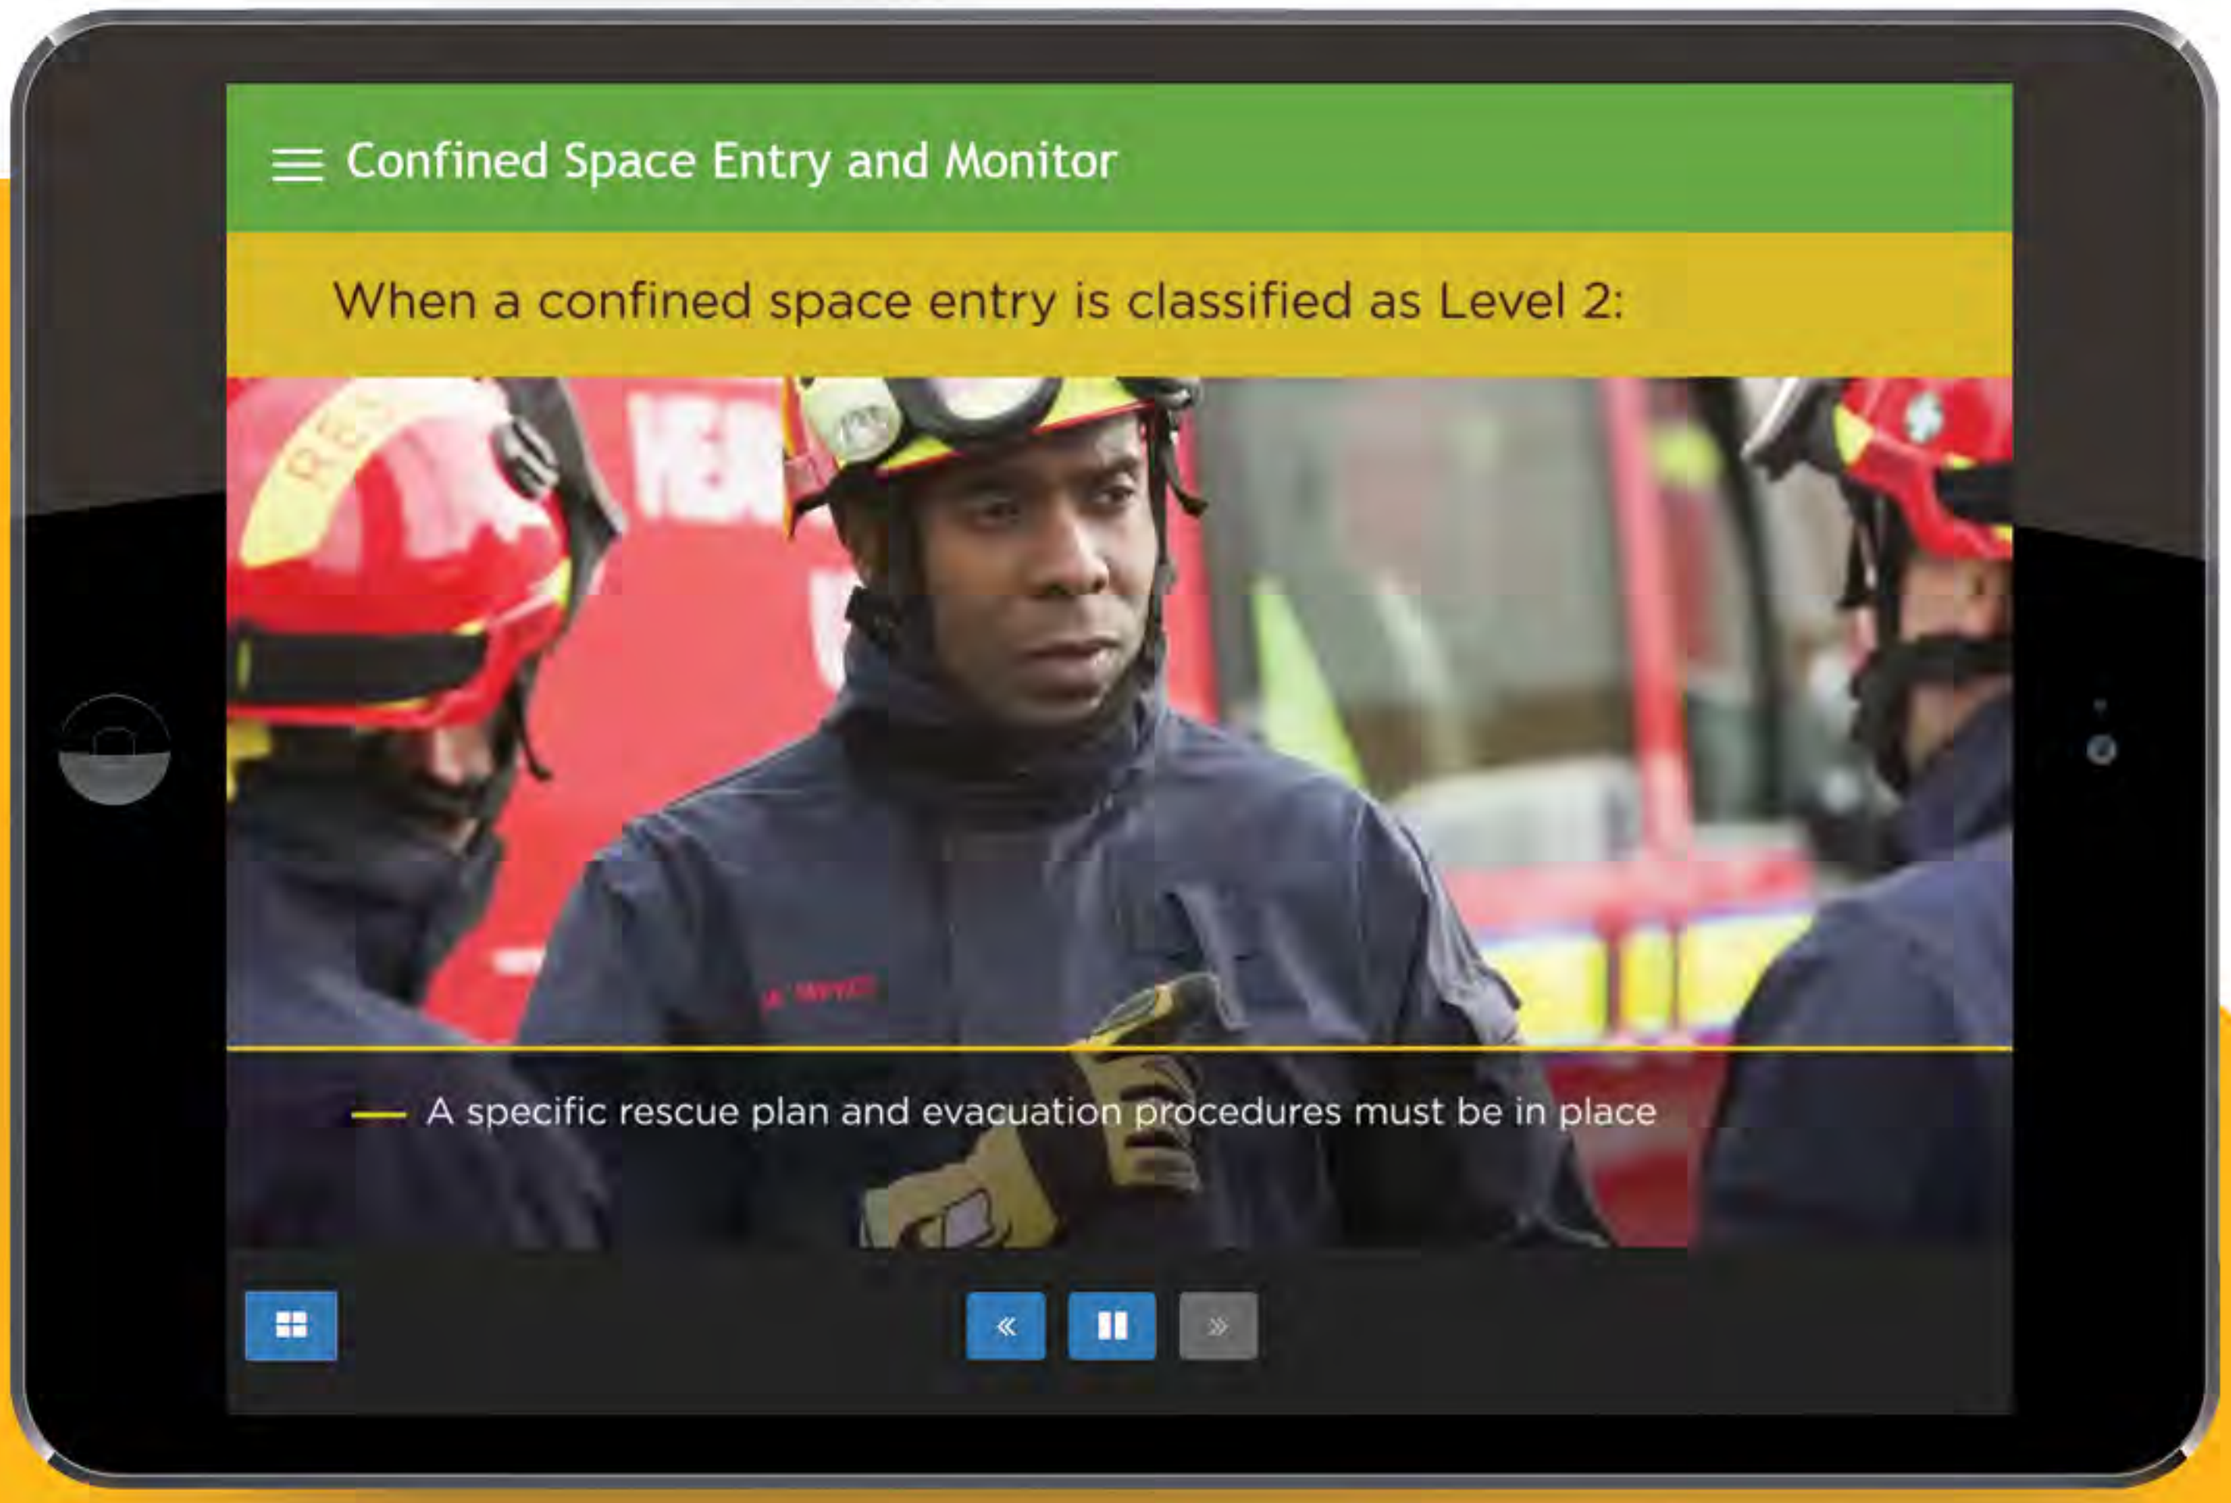
LEARNING MANAGEMENT SYSTEM



Creating interactive training courses is easy with the software's enterprise-level learning management system. With just a few clicks, you can upload a wide range of multimedia files, including .flv, .mp4, .jpg, .png, .gif, .swf, and HTML5, or link to externally hosted videos from YouTube, Vimeo, and Prezi. You can also upload your own custom-built PowerPoint or SCORM 1.2 and 2004 courses.

Want to test your employees' knowledge? The built-in exam engine lets you construct tests that are either standardized for all users or customized through question and answer randomization. This tool can also be used to develop surveys to elicit feedback from your employees.


Once your content is built and all desired options have been set, there are several easy ways to assign it to employees, including access codes, the training matrix, and individual, location, or role-specific permissions.
