

MineCost 365

From Exploration to Production

Accurate, automated costing for mining operations from exploration through production.

Automated, Investor-Grade Mining Costing — From Exploration to Production

MineCost 365 gives mining companies a clear, real-time understanding of their true costs standardizing costing across all stages of the mine and automating production consumption.

Purpose-Built Costing Automation for the Entire Mining Lifecycle

Mining companies face tight capital constraints, shifting economics, and growing pressure to deliver timely, defensible financial reporting. Yet most teams still rely on spreadsheets, manual reconciliations, and disconnected tools to manage costs across exploration, development, and production — leading to delays, inconsistencies, and audit exposure.

MineCost 365 replaces manual costing with a fully automated, mining-specific system that transforms operational activity into accurate, audit-ready financials each month — at any stage of the mining lifecycle.

Designed for exploration teams, feasibility groups, developers, and active producers alike, MineCost 365 delivers real-time cost visibility, standardized cost structures, and automated consumption workflows so finance teams can close faster, report confidently, and scale without relying on spreadsheets.

MineCost 365

From Exploration to Production

Accurate, automated costing for mining operations from exploration through production.

Key Benefits

- ✓ **Automates Costing Across the Entire Mining Lifecycle**
Eliminates manual calculations and spreadsheet-driven models by standardizing and automating costing from early exploration programs through full production.
- ✓ **Accurate, Auditable Financial Reporting**
Every calculation, adjustment, and posting is fully traceable – giving teams defensible, investor-ready financials at any stage of the mine.
- ✓ **Faster, More Reliable Month-End Close**
Standardized workflows, clean journals, and automated processes reduce manual corrections and shorten reconciliation time – whether you're drilling, developing, or producing.
- ✓ **Built for Exploration, Development, and Growth-Stage Operators**
Affordable, scalable, and designed to support companies evolving from exploration to production, delivering clarity throughout the transition.
- ✓ **A Single Source of Truth**
Costing, operational activity, and financial data live in one integrated system – eliminating disconnected tools, version conflicts, and manual data movement.

How It Works

MineCost 365 provides job costing to track costs during exploration, feasibility and development. For production-stage companies it uses your defined production structures (such as a Production BOM) to calculate expected consumption based on actual output. Each month, users enter production quantities – and MineCost 365 automatically the expected consumption of consumables and the costs of the finished product.

For example, producing 1,000 ounces of gold triggers automatic consumables calculations and creates a precise, traceable COGS entry – no spreadsheet required.

MineCost 365

From Exploration to Production

Accurate, automated costing for mining operations from exploration through production.

Smart Handling of Shortages

If inventory levels are insufficient, MineCost 365 flags the issue, recommends adjustments, and posts the corrections automatically.

This intelligent workflow ensures clean journals and complete traceability even when shortages occur.

Built for the Mining Lifecycle

MineCost 365 supports cost tracking across all stages:

Exploration → Feasibility → Development → Production

Job Cost Tracking Made Simple

Track drilling, sampling, studies, development, sustaining capital, and operating costs in a clean, structured job cost interface – without spreadsheet chaos.

Accuracy & Auditability

Supports:

- FIFO, Average, LIFO, Standard, Specific
- Unit cost overrides with audit tracking
- Automated cost refresh for consistent cost alignment

Compliance-Ready

Mining companies listed on stock exchanges must meet:

- GAAP reporting requirements
- IAS 21 foreign currency translation

Pair MineCost 365 with Apptitude's multi-currency solution for a complete compliance toolkit.

MineCost 365

From Exploration to Production

Accurate, automated costing for mining operations from exploration through production.

Why Mining Companies Choose MineCost 365

Mining financial reporting is too important — and too scrutinized — to rely on manual spreadsheets and siloed tools.

MineCost 365 provides:

- **Real cost visibility**
- **Automated production accounting**
- **Standardized cost structures**
- **Audit-ready reporting**
- **Faster closes and fewer month-end headaches**

It gives finance teams clarity and control from the earliest exploration programs all the way to full-scale production.

Implementation: Built on a Modern, Enterprise-Grade ERP Foundation

MineCost 365 is delivered natively inside Microsoft Dynamics 365 Business Central, giving mining companies a unified platform for finance, inventory, costing, production, and compliance — without disconnected systems or spreadsheets.

Instead of forcing new tools onto your team, MineCost 365 enhances an enterprise-grade ERP you may already use — or one we can implement as part of a complete modernization solution.

Ready to Modernize Your Mining Costing?

MineCost 365 delivers the automation and clarity mining companies need to scale. Connect with Apptitude to see it in action.
