Job Type: Full-time, Salary, Exempt, On-site
Job Location: Prosperity, SC

Job Description:

QC Management ensures their teams follow established rules for handling quality control issues, aids and help train the production team to help produce quality products. Work with a variety of departments and personnel - such as engineers and line workers - to test and assess the quality of product output. They must maintain knowledge of accepted industry testing practices, as well as any new developments in their industry.

Your duties will include:

- Oversee all daily operations of the quality department
- Oversees the collection and production samples to evaluate quality
- Conduct routine non-routine analyses of in-process materials raw materials, environmental samples, finished goods or stability samples.
- Perform the quality inspection process of new pat samples and record the data.
- Assign and verify corrective actions and track countermeasures for continuous improvement.
- Implement 5S area standards site wide.
- Support to create and establish proper process and procedure to meet Customer's requirements.
- Support to promote safety programs and safe work practices throughout.
- Support QC team with training measurement skills and QC tools and equipment.
- Responsible for development and implementing manufacturing processes, and work activities to meet all company's quality standards, and delivery standards.
- Educate quality procedures and process to the production team, and quality team as needed.
- Follow upon entering SQCI for all shipping OQC passed items.
