

BOR 8 RODS

*Protects Wood Against Fungal Decay
Solid Wood Preservative*

Protects Dimensional Lumber, Logs, Beams, Windows and other Exterior Wood Structures

- Bor8 Rods will stop existing rot and prevent its return
- Bor8 Rods are wood preservatives that are composed of this highest concentration of boron available.
- Bor8 Rods are inserted into drilled holes in wood that are rotting or has the potential to rot. They dissolve then diffuse with moisture.
- Come in 6 sizes and can be used to treat virtually any size from wood trim and millwork to large timbers and utility poles.
- Bor8 Rods can be used as a preventative treatment when wood is first put into service or as a spot treatment after decay has occurred.
