

*Protects Wood Against Fungal Decay
Solid Wood Preservative*

Bor8 Rods for Wood Window and Doors

Bor8 Rods can be installed before or after the windows or doors have been installed to provide a extra treatment in super critical areas.

- Bor8 Rods will stop existing rot and prevent its return for at least 10 years.
- Bor8 Rod are inserted into drilled holes in wood that is vulnerable to attack by insects or decay.
- When the internal moisture content of becomes 25% or higher, Bor8 Rods begin to dissolve, releasing boron which diffuses into the surrounding wood. A typical window can be treated with 4 Bor8 Rods
- If termites eat wood treated with boron, they die. If boron comes in contact with decay fungus, it dies. Fungal decay will not grow in borate treated wood
- Bor8 Rods are no more toxic to humans than ordinary table salt and do not require a pesticide applicators license.
- Bor8 Rods can be used as a preventative treatment when wood windows or doors are manufactured, first put into service or as a supplemental treatment after decay has occurred.
- Over 30 years of documented efficacy.
