Discounts available for group bookings or treatment plans.

Treatments are 20-40 minutes in duration, with Hangover-Cure being 45-60 minutes.

IV NUTRITIONAL THERAPY (IVNT) IS THE PROCESS OF INTRODUCING VITAL VITAMINS, MINERALS, ELECTROLYTES AND AMINO ACIDS DIRECTLY INTO THE BLOODSTREAM VIA INTRAVENOUS DRIP FOR MORE RAPID ABSORPTION.

Unlike taking a multivitamin tablet, IVNT delivers the vitamins and nutrients you need instantly, supercharging health and helping us feel and look better immediately.

Quick & Painless

Feel refreshed and revitalised in less than 60 minutes; simply relax during your treatment and return to your day fully rejuvenated.

Fast Hangover Relief

Providing relief from the after-effects of dehydration, this solution with glucose electrolytes will help soothe feelings of nausea, fatigue and anxiety to help you get your day back on track.

Supporting Weight Loss

IVNT can help kick-start metabolism, flooding your body with vitamins and nutrients to balance hormone levels and ensure you're in a good state to lose excess weight. It also helps support liver functioning which is important, as an under-performing liver can cause fat to build up, especially around the middle.

Increased Energy

Who doesn't sometimes want or need more energy and IVNT can deliver it in a much more healthy way than say a sugary drink or large coffee! Vital nutrients are delivered into your system, providing a significant and sudden energy boost.

Improved Skin

If you want your healthy youthful glow back this can be an effective alternative to more invasive procedures, leaving your skin looking healthier and softer with a reduction of fine lines and wrinkles.

Boost Immune System

Ensure you are well protected against infections by boosting your immune system with a dose of vitamin C and B complex, providing a fast and effective way of flooding cells with the nutrients they need for a powerful protective effect.

Helps Support Mental Health

Feeling better physically helps us feel better mentally. Mental health issues can put a strain on the body, so delivering targeted nutrients can give you a lift, helping you feel better.

Better Athletic Performance

IVNT can give you the edge when it comes to physical performance plus can help repair cellular damage and assist your body's natural healing, meaning reduced recovery time and improved endurance.
