Roku Remote

For Wear OS

The Roku Remote for Wear OS app is designed to control multiple Roku devices through Wi-Fi. It is designed to be a stand-alone app for normal functions but requires the companion Mobile app to set up the Roku IP Address and Favorites Lists and then push those lists to the Wear OS app. Once the lists are set up and pushed to the Wear OS app, there is no need to pull out your connected phone or tablet until one of the lists need to be changed. The Wear OS app can change device control and launch Favorites without the companion Mobile app. The Mobile app is also a fully functional Roku Remote control and does not depend on the Wear OS app.

Please make sure that your phone or tablet and Roku device(s) are connected to the same Wi-Fi network for the app to work. Please read this complete document before using the app.
