Tivo Remote

For Wear OS

The Tivo Remote app is designed to control multiple Tivo DVRs and set tops through Wi-Fi from your Wear OS or Android Wearable. It is designed to work with and without a connected phone. Please make sure that your wear device and Tivo device are connected to the same Wi-Fi network for the app to work. Please read this complete document before using the app.

Initial Setup

Download and open the app. Long press the Pause/Device button on Page 1 – Trick Play of the app to go to the Settings Page. Press ADD DEVICE on the Settings Page. Choose the Enter Device Name area to bring up the watch keyboard. Type the name of the Tivo device then press the forward arrow. Type the IP address of the Tivo device then press the check mark. Verify the name and IP address are correct and then press SAVE to save the device and return to the settings. You are now set to begin using the app to control your single Tivo device.

If you want to add multiple Tivo devices press add device once again and repeat the above steps to add as many Tivo devices that exist on your Wi-Fi network.
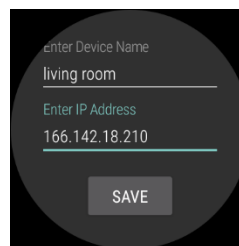

Initial setup is now complete. Swipe the Settings Page to the right to return to Page 1 of the app. If you need to access the settings screen after initial setup, simply go to Page 4 of the app for the settings button. Reference General App Usage.
