

## Hidden Guest Wireless Setup (Windows 10)

- To connect to the guest wireless you are able to do this from the login screen or after you login.
- If you need to connect to the Wi-Fi and you cannot get past the login screen you can go to the bottom right of the screen and click the little satellite to show you the available networks. You can then follow the rest of the guide after that.

- If you need to connect to the Wi-Fi and you can get logged into the computer you can then go to the bottom right of the screen and click the little satellite to show you the available networks. You can then follow the rest of the guide after that.

EAST TENNESSEE STATE UNIVERSITY

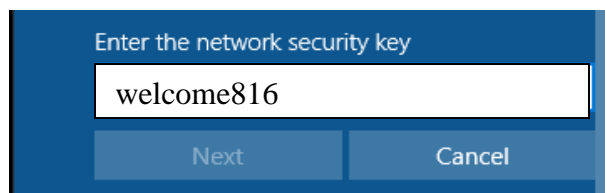

- Once you can see the available networks you will want to select Hidden Network. In addition you will want to make sure that the “connect automatically” box is checked so that it will save the network for next time. Then click connect.

- You will then need to provide the network name which is Quillen\_Guest. You must input the name exactly as shown or it will not connect.

- If it ask for a security type it is WPA2 Personal. However most Window machines will not ask for this and you can continue to the next step.
- Then you must enter the password for the network. It is currently welcome816 however this is subject to change.

- Once it says that it is connected you should then have network access.
