V ColorClone Pro

A Billion Colors at your Fingertips

Precision Digital Color Matching and Communication Platform for Hair Professionals, Retailers and Consumers at Your Fingertips

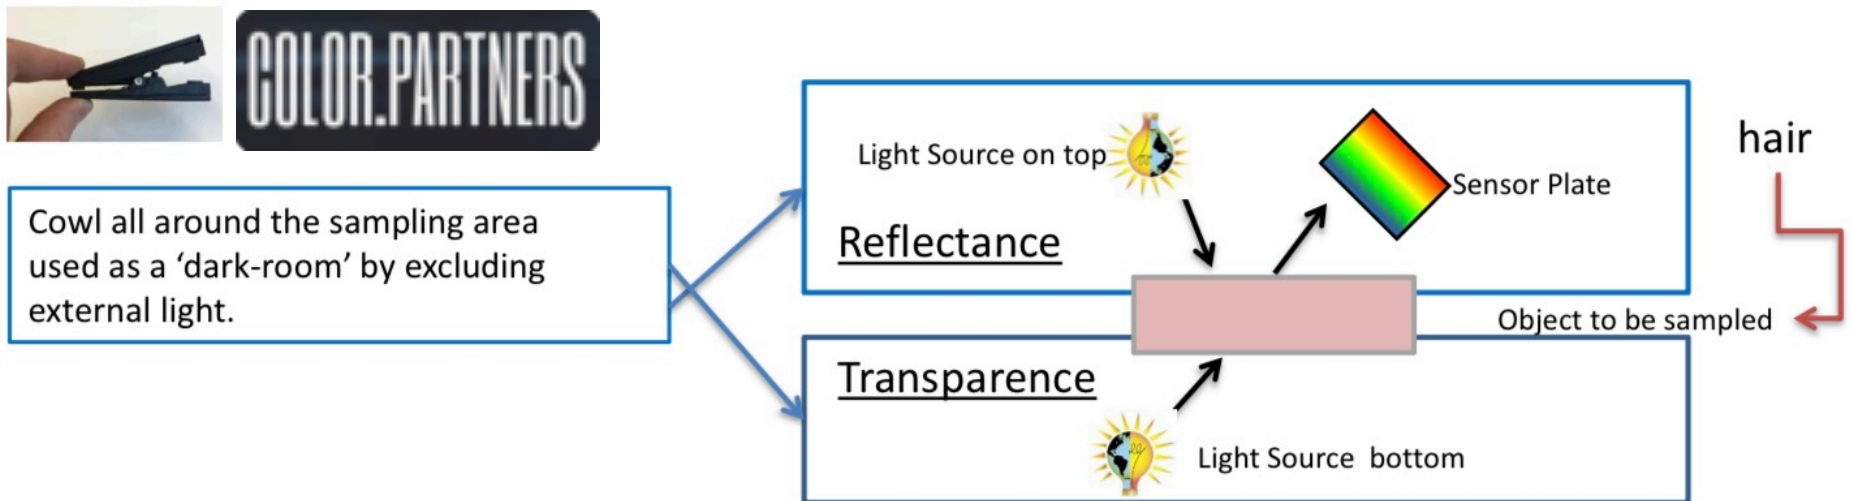

V ColorCapture V ColorClone V Condition Control V Communication

V Shaped Fingertip Translucency Capable Digital Hair Color and Condition Analyzer Enabling Professional Hairdressers with Accurate Colorant Mix Ratios, Hair Colors, Conditioners and at Retail

Developed, Patented and Demonstrated
Copyright © 2014-2024 PV74P - All Rights Reserved.

With a twin light source and sensor. A Peg-like design because it can hold all the components needed in the right positions.
It is simple to use and has gentle but firm holding for sampling hair.

The 3 Analyses: Colour & Reflectance & Transparence which gives us the ability to calculate Translucence

Empowering Professional Hairdressers with unique translucence calculations for precise modern colorant mix ratios, computerizing corrective coloring overcoming ambient lightening changes by efficiently using photonics, optics structure mechanics and fractals.

Enhancing Consumer Choice in Global Retail Markets where consumers can easily select a hair color from display swatches, match their own hair and find the exact product to achieve their desired look in salon, in store and online.

Assessing Hair Condition recommending conditioning treatments to boost hair health.

The V ColorClone Pro drives consumer engagement and confidence adding value to the purchase experience and strengthens brand loyalty while helping create a brand point of difference. With smartphone integration there is further potential for direct customer communication creating a new direct sales channel.

The V ColorClone Pro simplifies the color selection process for consumers purchasing home hair coloring kits

Color. Partners are offering an exclusive development partnership and patent license for our color matching device to a selected corporation within the global hair market

The COLOR.PARTNERS Color Technology Platform

Color.Partners designed, developed and patented a device and platform for the measurement of any color. The original intended users of this small handheld device were hairdressers and hair salons, product retail outlets and private individuals.

In the course of this process Color.Partners noted its color measurement device had application in all areas of color management transforming skin care, hair care, cosmetics, eye wearables, clothing and enabling communication of precise colors digitally creating a new platform for the commercial development of color superseding existing paper based and other color systems.
