

Ashland

Heavy Duty Heaters

MODELS 150C & 200C

Radiant Model

Cabinet Model

We at Ashland Stove realized a need in the market for a better coal burning stove, so we introduced to you the development of the "C" series of wood and coal burning stove models. Many years of stove construction expertise and craftsmanship has went into this design. You find quality and heavy duty construction in every Ashland Stove. Our units are designed and constructed for many years of trouble-free use. All models are Tested & Listed by OMNI-Test Laboratories, Inc.

The most important feature of any heating stove is safety. The second most important feature is efficiency. As in the past, Ashland has spared neither of these important features.

QUALITY CONSTRUCTION - LONGER LIFE

ASHLAND STOVES ARE CONSTRUCTED OF HEAVY GAUGE STEEL WITH A POSITIVE GASKETED TOP WHICH ENSURES A LASTING AIR-TIGHT SEAL.

OUR FIREBOXES ARE FIREBRICK LINED FOR STOVE LONGEVITY, EVEN HEAT RADIATION AND A HIGHER FIREBOX TEMPERATURE, WHICH MAXIMIZES EFFICIENCY.

HEAVY DUTY LATCHES AND GASKETED DOORS ENSURE AN OPTIMAL, AIR-TIGHT SEAL.

OUR CAST IRON SHAKER GRATES ARE OVER-ENGINEERED, DESIGNED TO PERFORM FOR MANY YEARS WITHOUT WARPING OR BURNING THROUGH.
