Aorn provides clinical guidelines, publications, continuing professional education, management courses, as well as scholarships and grants for nurses.

It has approximately 43,000 members and can relate to other industry professionals. Aorn Career Center is presented or nurses, especially in the United States. Anyone can use the site to search for jobs, advertise their resumes and career alerts, but only AORN members can use the personal salary calculator. ASSPAN serves about 60,000 participants with outpatient surgery, pain management, and early and post ART care. It offers professional training; publishes research, standards and clinical practice resources; and is involved in the law. Alternatively, nurses can register as full members, but other health professionals can register as associate members. APNA describes itself as an influential surgical nurse and creates opportunitiesYour responsibilities are your own, but you work together to make the procedure as effective as possible. A cleaning nurse works in the disinfected area of the office. Before approaching the surgical position, it is "dusted down" and sterile masks and clothing are put on. The nurse hands over surgical instruments and other materials to the doctor performing the operation. The nurse takes care of the hygiene of the operating area and ensures that everything remains sterile to reduce the chance of infection.

Nurses are also responsible for caring for the surgeon. If your glasses are foggy or sweaty, it is the nurse's responsibility to correct these problems so the surgeon can continue his work. During the intervention, the surgical nurse is also responsible for monitoring the patient's health. This includes monitoring the patient's vital parameters. The nurse is instructed to notify the physician if any potential problems arise. The district nurse acts as a liaison between the operating room and the rest of the hospital. It doesn't rub. A hospital nurse makes a preliminary assessment of a patient brought into the operating room and ensures that the patient is comfortable. The charge nurse also assists the surgeon, and the nurse also helps with cleaning and preparation for surgery. During the operation, nurses on duty at the center provide care packages if necessary. If something is needed from outside the room or the surgeon needs to relay a message to another staff member or family member, this task falls to the charge nurse. After surgery, the charge nurse counts the packages opened and materials used to make sure the numbers match. This is to ensure that no consumables are available during the patient's surgery.

The normal duties of nurses and nurses on duty in the operating room are to keep the operating room running. Everyone is responsible for P.
