

Career Exploration

This workshop series is a journey of self-exploration and reflection designed to help students better understand who they are and where they want to go. We'll explore students' passions, strengths, and values while providing tools and guidance to help students identify career paths that align with their unique interests and skills. By the end of this workshop series, students will have the agency and self-determination to guide them in their post-secondary planning conversations.

Investment \$4,750 for the entire series, \$950 per workshop. Workshop duration 45 - 90 minutes.

Values, Interests and Skills

Students will explore what drives them, identifying their core values, interests, and natural talents and skills to understand how these can inform their career paths.

Career Interest Inventory & Career Clusters Part 1

Students will complete a guided assessment to uncover career fields that align with their personal strengths and interests. They'll begin connecting their results to real-world career clusters and potential post-secondary pathways.

Career Interest Inventory & Career Clusters Part 2

Building on their initial results, students will dive deeper into specific career clusters and explore the education, skills, and opportunities required for success in each. This session encourages reflection and goal-setting tied to their emerging career themes.

Researching Careers

Students will learn how to use digital tools and labor market data to research salaries, growth trends, and qualifications for their chosen fields. This workshop equips them with data-driven strategies to make informed career and education choices.

Exploring Career In Our Community

Students will use career mind mapping to identify work-based learning activities that help them explore careers within their own communities. Students will discover how diverse career pathways contribute to community growth and opportunity.
