INTRODUCING  
**THE K9000** v2.0

# A STAND OUT BRAND

## THE FIRST K9000<sup>®</sup> DOG WASH WAS INSTALLED IN REGIONAL AUSTRALIA IN 2005.

This was, and still is, a great success at providing dog owners with the best most convenient way to wash their dogs on a regular basis. The ever popular K9000<sup>®</sup> has become the household name for DIY dog wash with over 1400 installations across the globe and over **2.5 million dogs washed in a K9000<sup>®</sup> last year alone.**

This kind of success is not by chance. The K9000<sup>®</sup> was created extremely well from the get go, with an amazingly solid design and has enjoyed the best possible reputation for functional reliability. **We love what we build!** We have seen design improvements over the years but it was time for us, as the market leader, to lever off 13 years of success and look to the future.

The K9000<sup>®</sup> 2.0 has been engineered with the same philosophy we have always had - build it to last - **keep it simple and deliver value,** while creating the perfect synergy of sophistication and technology.

At first glance the K9000<sup>®</sup> 2.0 is not all that different to the original, until you scratch below the surface and you will see that it is loaded with features that have been cleverly engineered in the simplest way.

*Cooper is nine years-young and loves everything in life - especially the beach! Here he is in his best super hero pose. Just missing the cape! Barb Kirby (Outback Australia).*

## FEATURE PACKED K9000<sup>®</sup> 2.0

### THE K9000<sup>®</sup> 2.0 IS CONTROLLED BY AN ALL NEW DEDICATED K9000<sup>®</sup> ECU

(Electronic Control Unit) which includes multiple new features. From the new soft touch customer interface, through to full tracking of the cycle, which can be broken down with **full comprehensive auditing.**

There are new security features along with a practical LED wash tub light that illuminates for the wash cycle and turns on at night, increasing visual impact. We understand the changing demand for all types of cashless payments, which led to the adoption of the **global standard MDB communication.** This allows for the simplest fitment of the most modern payment systems available and gives **full flexibility of price settings and top up payments.**

The K9000<sup>®</sup> ECU can also export data via global standard DEX communication which will enable greater control for the owner.

The K9000<sup>®</sup> ECU is a flexible platform which allows for "Custom Programming" for unique applications, all which can be quickly uploaded via an SD card. This new platform is the perfect synergy between technology and practical application.

Clever engineering has allowed for full monitoring without the complication of multiple sensors. The K9000<sup>®</sup> 2.0 is sophisticated and delivers many useful features that can add value, including **free disinfect and bonus time.** We offer no gimmicks or side shows just more of the same pride & professionalism that has driven 13 years of dog wash success.

THE K9000<sup>®</sup> V2.0 NOW COMES WITH A HIGHLY FLEXIBLE ECU
