

# We Are All in Trouble

Imagine this – FDA has 50% of its budget from vaccine companies, from the industry - 50%! The CDC has an \$11.5 billion budget and \$4.9 billion of that is buying and selling and distributing vaccines. CDC is a vaccine company – it owns 57 patents – so it can make money on every sale of a vaccine. NIH owns hundreds of vaccine patents. NIH owns half the patent for the Moderna vaccine! There are 5 individuals at NIH and the rules at NIH – if you're a scientist or an official working on a vaccine – you're allowed to collect \$150,000 a year in royalties on sales of that vaccine. These regulatory agencies are actually vaccine companies - they are not doing their job as regulators.

The senior scientist at CDC today – the senior vaccine safety scientist, who's vilified – who's still in fact at the CDC and he was the senior scientist there for 18 years, is the author or co-author on all the major studies that the CDC has produced on vaccine safety and particularly the studies that show that vaccines do not cause autism. His name is Doctor William Thompson. 3 years ago he came forward and he said how we have been ordered to fake all the science for the last decade on autism and he said in fact, we were in the major study – which is called the *(illegible)* and it's the most cited study on this subject on PubMed – and in that study we found out that black boys who get the MMR vaccine had a 363% greater risk of getting an autism diagnosis than black boys who waited. He said he was ordered to come into a conference room with all that data, with his 4 other co-authors by their CDC boss who then order them to destroy that data in front of him in CDC headquarters and then publish that study saying there is no effect.

So you have an agency that is really just an arm of industry and the people who are in my community who are being derided and vilified – who are mothers of vaccine injured children – who are being vilified in the press are saying wait a minute we have read the scientific studies, we have read about the industry corruption, we need to talk about this and they are being silenced by the press. They are not allowed to tell their stories and nobody is talking – not a single member of Anderson Cooper's staff or Sanjay Gupta – has made any effort to talk to Bill Thompson and he has been begging to be subpoenaed, and he's still at CDC.

I'm not anti-vaccine. People call me anti-vaccine because it's a way of marginalising me and silencing me. I've been trying to get mercury out of fish for 37 years – nobody calls me anti-fish. If they come up with a vaccine that does what Bill Gates says it's going to do, which is you give one shot and you get lifetime immunity, and there are vanishingly rare serious injuries, and it works, then I say – I tell people – “Yeah I'm gonna get it, let's go ahead and get it”. I agree with you there was tremendous faith in vaccination during that period. But when you grew up and I grew up we had 3 vaccines – and all of them were deemed necessary, they were feared diseases. Today's kids have to take 72 vaccines. 72 doses of 16 vaccines in order to stay in school.

The vaccines have another exemption that most people don't know about. They are the only medical product that does not have to be safety tested against a placebo. The vaccine program was conceived as a National Security defense against biological attacks on our country and they wanted to make sure that if the Russians attacked us with a biological agent – anthrax or something like that – we could quickly formulate a vaccine and then deploy it to 200 million American civilians without regulatory impediment. They said if we call it a medicine, we're going to have to test it and that takes 5 years to do double-blind placebo testing, so let's call it something else. We'll call it a biologic and we'll exempt biologics from safety testing.

So not a single one of the vaccines – the 72 vaccines now administered to our children – have ever been tested against a placebo. And I in fact sued HHS in 2016 and said show me any placebo studies that you have for any vaccines, and they were unable to, so none of them have been tested – and you don't have to sue them like I did – anybody can go on their cellphone and look up “manufacturers insert hepatitis B vaccine / GARDASIL vaccine / polio vaccine”, do you know how many days – the current polio vaccine – do you know how many days it was safety-tested for? 48 hours. The Hepatitis B vaccine – the Glaxo version – was 4 days. The Merk version – 5 days. That means that if the baby they gave it to had a seizure on day 6 – it never happened. If the baby died on day 6 – it never happened. If the baby got food allergies that were diagnosed 2 years later – it never happened. If the baby got autism which is not diagnosed until 4 years of age, 4.2 years of age – it never happened. Auto-immune diseases – you cannot see those. If you have these short-term studies then you can't see any risk if you don't test against a placebo. Because of that, nobody knows the risk profile for any vaccine that is currently on the schedule, and that means nobody can say with any scientific certainty if that vaccine is averting or decreasing more deaths than its causing.

Now my question is, how in the heck can we be mandating to children that they take a medical product for which we do not know the risk? And to me that is criminal!

They're skipping key parts of the test! The Moderna vaccine which is the lead candidate, skipped the animal testing altogether. When they came to human testing, they tested it on 45 people. They had a high dosage group of 15 people, a medium dosage group of 15 people and a low dosage group of 15 people. In the low dosage group, 1 of the people got so sick from the vaccine they had to be hospitalised – that's 6%! In the high dosage group 3 people got so sick they had to be hospitalised – that's 20%! They're going ahead and making 2 billion doses of that vaccine!

And by the way, they are only giving these vaccines in these tests that they're doing to the healthiest people. If you look at their exclusionary criteria:

- you cannot be pregnant;
- you cannot be overweight;
- you must have never smoked a cigarette;
- you must have never fainted;
- you must have no respiratory problems in your family;
- you can't suffer asthma;
- you can't have diabetes;
- you can't have rheumatoid arthritis.

These are the people they're testing the vaccines on - but that's not who they're going to give them to! These people are like the avengers! They're like superman! You could shoot them with a bullet and they won't go down! But what happens when they give them to the typical American – you know, 'Sally Sixpack' and 'Joe Bag-of-Donuts' who is 50 pound overweight and has diabetes?

At least 54% of Americans now have diabetes and are overweight. 54% of us has chronic disease! They're testing it on one group and they're going to give it to another and we need to know what the risk factor is in the people that they're going to give it to.
