

Track head and independent assurance.

Richardson Rail Services has experience managing and implementing engineering assurance, in accordance with 02009 and the relevant discipline standards. They are also capable in ensuring design & construction compliance with CDM and CSM standards and support with clients, contractors and designs in a responsible design & construction approach, managing change and production of technical queries.

Richardson Rail Services has abundant resource that are capable of managing track interface, conformance and handcar to ensure the integrity of the track infrastructure is always upheld during and following engineering works affecting the track zone of influence. All personnel are trained to the most recent track hand-back certification standards and fully briefed on the use on new and changing standards as they continue to evolve.

Other specific elements that Richardson Rail Services are capable of provide technical support with:

- Reviewing and managing Inspection Test Plans
- Production and approval of Track Monitoring Plans
- Management and implementation of Critical Rail Temperature process
- Review and approval of Work Package Plans and Risk Assessments in accordance with Construction Phase Plans
- Manage the Asset Management Process from AMP9 Asset status, through to Final sign off AMP17

Richardson Rail Supporting services

Can supply competent, trained and certified track engineers to complete certification of conformance handing the track back safe for the passage of trains following engineering works.

All hand-back personnel are:

- Professional interviewed
- Assessed by certified trainer's and approved NWR track engineer's
- All hold a minimum of safety critical competency of COSS
- Hold a record of CPD and training log book to demonstrate competency

Richardson Rail Services strive to provide completely impartial and independent knowledge, experience and support to client's, contractor's and designers to ensure absolute compliance with CDM.

Richardson Rail Services Specific Capabilities

Track Services:

- Production and implementation of Track monitoring plans
- Production and implementation of Critical rail temperature management plans
- Critical rail co-ordinator and manager
- Track monitoring
- Remote void monitoring
- Remote critical rail monitoring
- Supply Track Engineering Head
- Supply Track Permanent Way CRE
- Supply Telecoms CRE
- Track engineers

Safety Critical Staff

- COSS
- Engineering supervisors
- PICOP
- Level A issuing Conductor rail permits
- Level B DC Isolations strapping
- Level B DC Isolations switching
- HV Competent Person
- HV Assessor
- Safe system of work Planning
- Possession Planning
- Train Planning
- Hot weather Patrolling and Watchmen
- Safe Train loader
