

# RPA – workflows Arbutus Analyzer

The screenshot displays the Arbutus Analyzer workflow editor. The main workspace shows a workflow starting with a data source icon labeled 'GUA\_DEMO' with a value of '4,630'. This is followed by a data processing icon, then a split into two parallel paths, each ending with an output icon. A red arrow points from the 'GUA\_DEMO' icon to an 'Extract' dialog box.

The 'Extract' dialog box is open, showing the following configuration:

- Data to Extract:** Selected Fields (radio button selected)
- Fields List:** Factura, Fecha, Monto\_Total, Nombre\_Proveedor, Proveedor
- Filter Expression:** Find( "S.A.",Nombre\_Proveedor ) AND Monto\_Total >= 100000

Buttons at the bottom of the dialog include 'More >>', 'OK', 'Cancel', and 'Help'.

**Ejemplo de Workflow** con la herramienta Arbutus en modalidad "NO CODE" y es una muestra de lo sencillo que es "Extraer", "Sumarizar" y generar "Output"
