

## Operation

### Match spray pattern to your layout

Adjust sprinkler to fit your layout by selecting full or part-circle spray patterns.

**Full circle:** Flip trip lever up to allow sprinkler to rotate 360° (see **Figure 1**).

**Part circle:** Flip trip lever down and adjust the sprinkler collars. The angle between the collar handles determines the arc the sprinkler will water (20° to 340°) (see **Figure 2** and **3**).

### Maintenance & Troubleshooting

- Do not use oil, grease, or pipe dope on sprinkler.
- Check sprinkler nozzle for debris.
- Check valve function.
- Check timer function.

### Replace a Nozzle

1. With a screwdriver, remove the top cover cap (**Figure 4**).
2. With needlenose pliers, remove the top cover (**Figure 5**).
3. Pull the rotor arm aside to expose the nozzle (**Figure 6, A**).
4. Rotate the nozzle tab down to release the nozzle (**Figure 6, B**).
5. Remove the nozzle and replace with a new one.
6. Turn the nozzle tab clockwise to lock the new nozzle in place.
7. Push the top cover back into place.
8. Install the top cover cap.

**Note:** When using the orange or red low-flow nozzles, move Adjustment Spring to the **Figure 7, B** position for best operation.

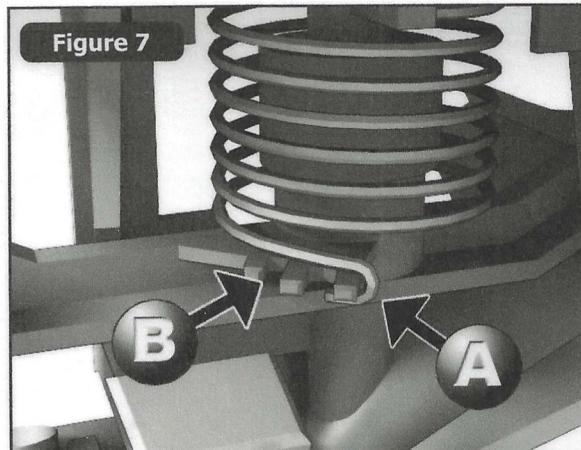

Figure 7

### Reduce Spray Distance

To reduce the spray distance (radius) up to 25%, with the sprinkler running, turn the spray reduction screw clockwise into the stream; turn counterclockwise to increase the spray radius (see **Figure 8**).
