MEGHDOOT

Our answer
to the global water problems

Objective

Re-inventing water access and water purification with decentralised, sustainable and highly scalable, water solutions.
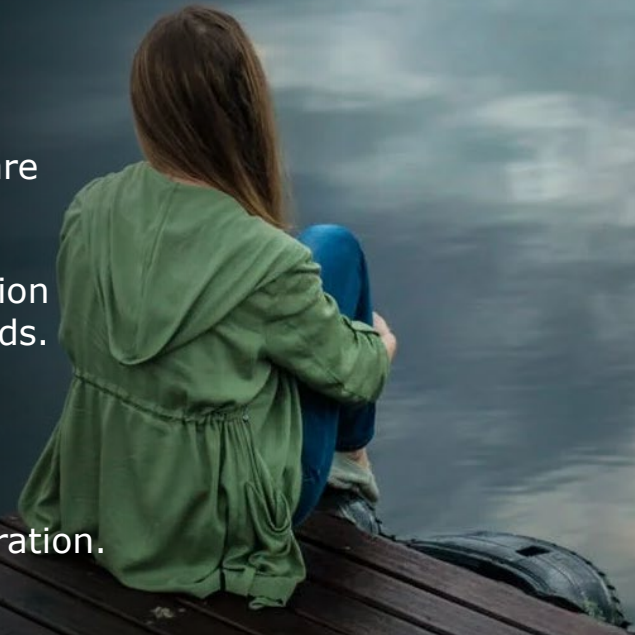

The Global
Water Problem

More than half of the planet's 37 largest groundwater aquifers are being depleted. Surface-based freshwater bodies are drying up.

Pairing this with increased demand from growing global population and poor agriculture practices, we have a dire-situation our hands.

With the current rate of consumption, two-thirds of the world's population will face water-shortages by year 2025. No solution exists which solves both water purification and freshwater generation.

The planet needs a reliable-solution to this grave problem.

What if we told you,
Water from Air is a sustainable answer to this problem?

Meet
MEGHDOOT

Our answer to global water problems.

We all know that there is water in the air,
but what is not commonly known is-
the sheer volume of water present in it.

Built on the **concept of Atmospheric-Water-Generation**
our product is *capable of generating clean, potable water
from air.*

No groundwater needed, no surface water required.

Atmospheric Water Generators

Atmospheric Water Generators are the solution to global water crisis- Water generation and purification in one-solution.

NO CARBON EMISSIONS.
Our solutions do not rely on delicate natural resources and produce no-exhaust gasses. When powered by Renewable Energy, there are zero-emissions both directly and indirectly.

100% WATER POSITIVE.
Zero-reliance on available water resources and zero-wastage of water. It assures consistent high-quality water and helping groundwater sources to recharge.

Personal source of water

We provide re-mineralised water with customised solutions.

amazon

Clean water for Amazon's largest campus in the world

Helping to make Amazon buildings and campus sustainable by improving water efficiencies and water resource management

Making the World's Largest e-Retailer Water Secure

+ Healthy, mineral dosed water to all staff

+ Costs reduced to a fraction of bottled water

+ Being scaled to other campuses / warehouses

Private Public Partnership delivering water, knowledge and entrepreneurship

Water for Urban and Rural Communities

+ Collaboration with USAID and GVMC to provide last mile connectivity

+ Knowledge sharing on water, hygiene sanitation practices to marginalised communities

+ Being scaled to villages with Berkeley University as part of the **Smart Village Movement** and other urban communities

www.sync-global.com

Microsoft

Multisite water project to provide anywhere, anytime access to 100% pure water throughout the largest campus in Hyderabad.

Helping Microsoft become Water-Positive

+ Immense savings in plastic pollution

+ Ambition to expand to all offices in India and create water habits to enhance productivity

Provided a decentralised solution to the Municipal Administration office to meet its drinking water requirement

Clean Water for Municipal Office in a Water-Scarce City

+ On-demand and rapid access to clean water

+ Helps reduce external dependency and provides on demand access high quality, clean water

+ Expanding to other municipal offices across Tamil Nadu for captive use and assess the solution for other applications

www.sync-global.com

First railway in the world with AWG technology
Massive Water Conservation project for the
future of Indian rail

Improved Access to Clean, Potable Water for People on the Move

+ Affordable & incentivized Reduction in Plastic Waste

+ Direct and Indirect Employment opportunities

+ Rapid infrastructure deployment being rolled out across 1000 stations and other public locations

www.sync-global.com

Provide a dependable water source to locals and tourists at a tourist spot in a water-scarce river island plagued with saline water sources

Free Potable Water Project in a Water-Scarce Town (CSR)

+ Installed as a CSR Project by TCIL, Maintenance on-site by DRDO.

+ Access to clean, healthy, mineral-enriched drinking water at a tourist spot

+ Eliminate reliance on extremely-scarce freshwater sources
