

Enterprise Operational Visibility for Modern Windows Environments

Insight by Cyber Zones is a Windows-native operational visibility and insider risk awareness platform. Real-time behavioral telemetry. Lightweight enterprise deployment. MITRE ATT&CK-mapped detection. On-premise, always.

2 EXECUTABLES	<30m FULL DEPLOYMENT	100% ON-PREMISE	0→100 REAL-TIME RISK SCORE
-------------------------	-----------------------------------	---------------------------	--------------------------------------

OPERATIONAL VISIBILITY CAPABILITIES

 <p>Authorized Investigative Screenshot Capture Policy-authorized endpoint screenshots for investigative and audit purposes. Configurable capture intervals with full admin console access.</p>	 <p>Endpoint Activity Telemetry Windows sessions, applications, URLs, and file operations — all timestamped, indexed, and searchable for operational and investigative review.</p>
 <p>Behavioral Risk Scoring Engine Per-device 0-100 risk scores. Unacknowledged alerts weighted by severity with time decay. High-risk endpoints surface first for review.</p>	 <p>USB & Peripheral Visibility Detect USB device connections, autorun events, and domain join/leave changes the moment they occur across managed endpoints.</p>
 <p>Network & Bandwidth Monitoring Track network usage by application. Detect anomalous data transfer patterns and unauthorized anonymiser tool usage.</p>	 <p>Lightweight Enterprise Agent Low-footprint tray-based agent. RSA-2048 signed licensing. DF-API-protected credentials. GPO-deployable. No data leaves your premises.</p>

MITRE ATT&CK Every Insight alert is automatically mapped to a MITRE ATT&CK technique and tactic. Initial Access · Execution · Persistence · Privilege Escalation · Defense Evasion · Credential Access · Collection · Exfiltration · Impact. No manual tagging. Full ATT&CK matrix visibility out of the box.

ENTERPRISE DEPLOYMENT MODELS

Starter Evaluation	SMB Deployment	Enterprise Deployment	Pilot Engagement	On-Premise Infrastructure
