Insight by Cyber Zones is a Windows-native operational visibility and insider risk monitoring platform designed for enterprise environments. The platform provides centralized endpoint visibility, behavioral monitoring, risk-based alerting, and investigative support capabilities through a fully on-premise deployment model. Insight enables organizations to improve operational awareness, strengthen governance visibility, support internal investigations, and detect suspicious endpoint activity — while maintaining full local control over infrastructure and data.

OPERATIONAL VISIBILITY CAPABILITIES

- Suspicious process execution visibility
- User session login/logout monitoring
- USB device connection visibility
- File activity monitoring and anomaly detection
- Domain join/leave event visibility
- Network bandwidth monitoring by application
- Browser activity telemetry
- Policy-based behavioral alerting
- Risk-based endpoint scoring
- Threat correlation and activity analysis
- Authorized screenshot capture for investigations

HOW IT WORKS

1

Install Console
Run
Insight.Server.exe
on your admin
machine.
Dashboard + API
start instantly.

2

Deploy Agent
Push
Insight.Agent.exe
to endpoints via
GPO, login script,
or manual install.

3

**Centralized
Visibility**
Endpoints
report
operational
telemetry,
alerts, and risk
indicators
directly to the
management
console.

BEHAVIORAL ANALYTICS & RISK DETECTION

- Per-device risk scores (0-100, real-time)

→ Authorized live endpoint session visibility

→ Alert storm detection (pattern clustering)

→ File spike & rapid rename detection

→ After-hours activity flagging

→ Tor/anonymiser tool detection

→ Compound threat correlation engine

MITRE ATT&CK COVERAGE

Every Insight alert is automatically enriched with a MITRE ATT&CK technique ID and tactic. No manual mapping required.
