R. K.-1102

- Plant type** : Semi determinate and broader leaves which cover fruits
- First picking** : 60-65 days after transplanting
- Fruit type** : Dark red in colour with shiny thick pericarp, hard and oblong in shape. Fruits are 3-4 in bunches
- Average wt.** : 90-100 gms.
- Specification** : Fruit mesocarp is very thick, So, it can be transported to long distance. Highly tolerant to TLCV and high temperature. Can be successfully grown in summer as well as rainy season

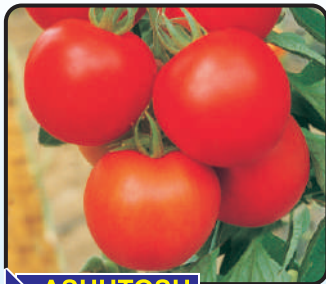

R. K.-1175

- Plant type** : Semi determinate, early maturity, thick branches, broad leaves with dark green colour
- Plant height** : 180-200 cm.
- First picking** : 60-65 days after transplanting
- Fruit type** : Oblong in shape and dark red in colour
- Average wt.** : 100-110 gms.
- Specification** : Fruit mesocarp is very thick, so, it can be transported to long distance. Highly tolerant to TLCV and high temperature. Can be successfully grown in summer as well as rainy season

SHAHENSHAH

- Plant type** : Determinate with dark green foliage. Broad leaves with thick branches
- First picking** : 60-65 days after transplanting
- Fruit type** : Round in shape, very good fruiting, fruit colour is dark red, shining and attractive. Fruit pericarp is thick, excellent keeping quality
- Average wt.** : 90-100 gms.
- Specification** : Highly tolerant to TLCV & high temperature. Successfully grown in summer as well as rainy season. Suitable for distant transportation and new markets

ASHUTOSH

- Plant type** : Determinate with broad leaves & thick branches
- First picking** : 60-65 days after transplanting
- Fruit type** : Dark red in colour, hard, semi-round in shape with thick pericarp
- Specification** : Tastes good due to acidic nature. Good for diversified areas. Suitable for long distance transportation and new markets

R. K.-DESI

- Plant type** : Determinate, strong
- Maturity** : 60-65 days after transplanting
- Fruit type** : Round in shape, Dark red in colour with green shoulder
- Average wt.** : 80-90 gms.
- Specification** : Good for transportation.
- Quality** : Acidic in nature, very sour in taste

R. K.-505

- Plant type** : Determinate, broad leaves, thick branches
- First picking** : 65-70 days after transplanting
- Fruit type** : Deep red in colour, hard, semi-round in shape, thick flesh
- Average wt.** : 90-100 gms.
- Specification** : Highly tolerant to virus, can be successfully grown in rainy season

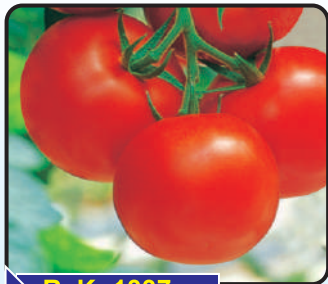

R. K.-123

- Plant type** : Indeterminate, broad leaves with thick branches
- First picking** : 60-65 days after transplanting
- Fruit type** : Round in shape, very good fruiting, fruit colour is dark red, shining and attractive. Fruit pericarp is thick, good keeping quality
- Average wt.** : 80-90 gms.
- Specification** : Suitable for long distance transportation and new markets

YUVRAJ

- Plant type** : Indeterminate with heavy fruiting, dark green colour leaves
- First picking** : 60-65 days after transplanting
- Fruit type** : Round in shape, uniform, shiny, deep red in colour, thick flesh
- Average wt.** : 80-90 gms.
- Specification** : Suitable for distant transportation. Highly tolerant to TLCV and high temperature. Can be successfully grown in summer as well as rainy season.

R. K.-1337

- Plant type** : Indeterminate, broad leaves with thick branches
- First picking** : 60-65 days after transplanting
- Fruit type** : Round in shape, very good fruiting, fruit colour is dark red, shining and attractive. Fruit pericarp is thick, good keeping quality
- Specification** : Highly tolerant to TLCV and high temperature. Highly tolerant to bacterial wilt & recommended for sowing in bacterial wilt sick fields

R. K.-444

- Plant type** : Determinate with broad leaves & thick branches
- First picking** : 60-65 days after transplanting
- Fruit type** : Average weight 80-100 gm. Dark red in colour, hard, semi-round in shape with thick pericarp
- Specification** : Tastes good due to acidic nature. Highly tolerant to TLCV & high temperature. Suitable for long distance transportation.

R. K.-186

- Plant type** : Strong plant with very good yield
- First picking** : 40-45 days after sowing
- Fruit** : Length about 35-40 cm., weighs about 90-100 gms. with less no. of seeds. Very good in taste
- Specification** : Suitable for sowing in both seasons

NAGIA-2

- Plant type** : Strong plant with very good yield
- First picking** : 40-45 days after sowing
- Fruit** : Length about 45-50 cm., weighs about 110-130 gms. with less no. of seeds. Very good in taste
- Specification** : Suitable for sowing in both seasons

NISHA-212

- Plant type** : Thick, erect and hard
Plant height : 80-85 cm.
Fruit colour : Green (Yellowish)
First picking : 70 days after transplanting
Fruit surface : Smooth
Fruit length : 14-16 cm.
Fruit thickness : 1.3-1.5 cm.
Pungency : High
Specification : Suitable for fresh market (green) as well as drying purpose (red). Can be sown round the year depending on climate

R.K.-1067

- Plant type** : Robust, Erect and hard
Plant height : 85-90 cm.
Fruit colour : Shiny Green
Fruit surface : Thick with Wrinkles
Fruit length : 14-16 cm.
Fruit girth : 1.4-1.6 cm.
Pungency : High
Specification : Excellent plant vigour, long and thick fruits, uniform drying with high circular wrinkles. Very Excellent red dry color very good chilli powder yield. Highly recommended for drying purpose.

CHANDA-079

- Plant type** : Straight and hard
Plant height : 85-90 cm.
Fruit colour : Green
Fruit surface : Smooth
Fruit length : 9-10 cm.
Fruit girth : 1.0-1.1 cm.
Pungency : High
Specification : Suitable for fresh market (green) as well as drying purpose (red). High resistance to LCV (Leaf curl virus) & good heat set

R. K.-219

- Plant type** : Vigorous, straight and strong
- Plant height** : 80-90 cm.
- Fruit colour** : Parrot green
- First picking** : 70 days after transplanting
- Fruit length** : 7-9 cm.
- Fruit thickness** : 1-1.2 cm.
- Pungency** : High
- Specification** : Suitable for fresh market (green) as well as drying purpose (red)

R. K.-221

- Plant type** : Straight and strong
- Plant height** : 90-95 cm.
- Fruit colour** : Dark green
- Fruit length** : 7-9 cm.
- Fruit picking** : 70 days after transplanting
- Fruit thickness** : 1-1.2 cm.
- Pungency** : High
- Specification** : Suitable for fresh market (green) as well as drying purpose (red)

PRIYANKA-136

- Plant type** : Erect and hard
- Plant height** : 85-90 cm.
- Fruit colour** : Shiny Green
- Fruit flesh** : Smooth
- Fruit length** : 12-13 cm.
- Fruit girth** : 1.2-1.3 cm.
- Pungency** : High
- Specification** : Suitable for fresh market (green) as well as drying purpose (red). Sowing can be done in rainy, summer and mild winter season

FALCON

- Plant type** : Vigorous, straight and strong
- Plant height** : 80-90 cm.
- Fruit colour** : Dark green
- First picking** : 70 days after transplanting
- Fruit length** : 8-10 cm.
- Fruit thickness** : 1.0-1.1 cm.
- Pungency** : High
- Specification** : Fruit surface is slightly wrinkled. Suitable for fresh market (green) as well as drying purpose (red)

NAVDURGA

- Plant type** : Straight and strong
- Plant height** : 90-95 cm.
- Fruit colour** : Dark green
- Fruit length** : 8-10 cm.
- Fruit picking** : 70 days after transplanting
- Fruit thickness** : 0.8-0.9 cm.
- Pungency** : High
- Specification** : Suitable for fresh market (green) as well as drying purpose (red)

SHIVANI

- Plant type** : Erect and hard
- Plant height** : 85-90 cm.
- Fruit colour** : Shiny Green
- Fruit surface** : Smooth with wrinkles
- Fruit length** : 14-15 cm.
- Fruit girth** : 1.2-1.4 cm.
- Pungency** : High
- Specification** : Suitable for fresh market (green) as well as drying purpose (red). Sowing can be done in rainy, summer and mild winter season

GREEN LONG

- Plant type** : High yielding variety, 70-90cm in height, spineless branches and leaves
- Days to maturity** : 65-70 days after transplanting
- Fruit** : Green in colour, long and cylindrical in shape
- Fruit weight** : 70-80 gms.
- Specification** : Suitable for round the year sowing in different agro climatic conditions

NAVJYOTI

- Plant type** : Early maturity, bushy, spineless, hard & straight
- Days to maturity** : 62-67 days after transplanting
- Fruit colour** : Very shiny dark purple
- Fruit shape** : Round to Oval
- Fruit weight** : 200-270 gms.
- Specification** : Suitable for round the year sowing in different agro climatic conditions

SANWALI-132

- Plant type** : High yielding variety, 70-90cm in height, spineless branches and leaves
- Days to maturity** : 65-70 days after transplanting
- Fruit** : Dark purple in colour with cylindrical shape & green calyx
- Fruit weight** : 80-100 gms.
- Specification** : Suitable for round the year sowing in different agro climatic conditions

PINKI-407

- Plant type** : High yielding variety, 70-90cm in height, spineless branches and leaves
- Days to maturity** : 65-70 days after transplanting
- Fruit** : Shiny pink colour with cylindrical shape & green calyx
- Fruit weight** : 100-125 gms.
- Specification** : Suitable for round the year sowing in different agro climatic conditions

GOPI-75

- Plant type** : High yielder, strong branching, spineless
- Days to maturity** : 65-70 days after transplanting
- Fruit** : Long without spines, dark purplish black in colour, very shiny, weighs about 100-120 gms.
- Specification** : Suitable for sowing in rainy and summer season

DASHRATH

- Plant type** : Early maturity, bushy, spineless, hard & straight
- Days to maturity** : 65-70 days after transplanting
- Fruit colour** : Shiny Black
- Fruit shape** : Oval
- Fruit weight** : 150-350 gms.
- Specification** : Suitable for round the year sowing in different agro climatic conditions

UMA-60

- Plant type** : Short straight leaves with medium green colour.
Tropical hybrid
- Curd weight** : 600-700 gms.
- Curd shape** : Dome & white in colour
- Harvesting** : 55-60 days after transplanting
- Specification** : Tolerant to black rot and high temperature. Suitable for dense planting
- Sowing time** : 25 May to 10 July

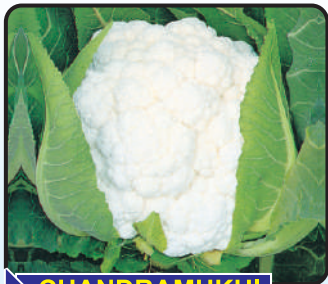

SARITA

- Plant type** : Straight leaves which protect flower from heat.
Tropical hybrid
- Curd weight** : 1 kg.
- Curd shape** : Dome & white in colour
- Harvesting** : 65 days after transplanting
- Specification** : Suitable for variable climate
- Sowing time** : 1 August to 10 Sept.

PARINEETI

- Plant type** : Very dark green straight leaves which protect flower from direct sunlight
- Curd weight** : 1.5-2.0 kgs.
- Curd shape** : Dome or globe
- Curd colour** : Pure white
- Compactness** : Excellent
- Harvesting** : 75-80 days after transplanting
- Specification** : High resistance to black rot & soft rot. Excellent for distant transportation
- Sowing time** : 10 Sept. to 30 Nov.

CHANDRAMUKHI

- Plant type** : Late snowball type
- Curd weight** : 1.5 to 2.0 kgs.
- Curd shape** : Dome shape & hard
- Curd colour** : Snow white
- Harvesting** : 80-85 days after transplanting
- Specification** : Tolerant to black rot and diamond back moth
- Time of sowing** : South India-Round the year
Plains-Sept. to Nov.
Hilly areas-Feb. to March

MITANSH

- Plant type** : Very dark green straight leaves which protect flower from direct sunlight
- Curd weight** : 1.5 to 2.0 kgs.
- Curd shape** : Globe shape & hard
- Curd colour** : Snow white
- Harvesting** : 90 days after transplanting
- Specification** : Tolerant to black rot and diamond back moth
- Time of sowing** : 10 Oct. to 10 Dec.

R. K.-70 (OP)

- Plant type** : Snowball type
- Curd** : Pure white in colour.
Weights 1.0 to 1.5 kgs.
- Harvesting** : 70-75 days after transplanting
- Time of sowing** : Sept. to 10 Nov.
- Specification** : Tolerant to black rot and diamond back moth. This OP (Open pollinated) cauliflower is a wonderful research selection which can perform brilliantly, equivalent to hybrid under optimum environmental conditions. This variety can give 25-30% more yield than other standard OP varieties

ROCK STAR

- Plant type** : Very early maturity
Head shape : Very Strong round head with bluish green colour
Head weight : 800-900 gms.
Maturity : 58-60 days
Specification : Very early cabbage hybrid. Field holding capacity of 40 days

R. K.-65

- Plant type** : Medium time maturity
Head shape : Head is strong, round & dark green in colour
Head weight : 1 kg.
Maturity : 65-70 days after transplanting
Specification : Field holding capacity is of 40-45 days after maturity. Resistant to Black rot, soft rot & fusarium wilt. Heat tolerant upto 40°C

GARIMA-72

- Plant type** : Medium maturity
Head shape : Strong head, round in shape with bluish green colour
Head weight : 1 kg.
Maturity : 65-70 days
Specification : Field holding capacity about 30 days. Tolerant to black rot, soft rot and fusarium wilt

R. K.-509

- Plant type** : Plants are erect, 170-180 cm. long with no hairs on leaves
- First picking** : 40-45 days after sowing
- Fruit** : Dark green in colour with five ridges, 12-13 cm. in length
- Specification** : Highly tolerant to virus. Suitable for sowing in summer and winter season.

RUKMANI-711

- Plant type** : Plant height about 170-180 cm with leaf pubescence
- First picking** : 40-45 days after sowing
- Fruit** : Fruit has 5 ridges with shiny dark green colour
- Specification** : This variety can be grown in both summer & winter season. Highly tolerant to YVMV & ELCuV. Yield is 20 to 30% higher over other varieties

NEELAM BLACK

- Sowing time** : October to November
- Leaf colour** : Dark green
- Weight** : 110-125 gms.
- Bulb** : Dark red (with blackish touch) in colour & shiny
- Pungency** : Less
- Specification** : Onion with high storage capacity. Can be stored for 8-10 months. Very good uniformity

MAKHMALI-G

- Plant type** : Early maturity and vigorous plant growth. Upright plants with broad & soft leaves
- Maturity** : 48 days after sowing
- Specification** : Shiny dark green colour, late bolting, good in taste. Multi-cut variety, good for cooking & can be eaten raw as salad. High temp. tolerance & resistant to fungal diseases

TRENDY

- Plant type** : Early maturity and vigorous plant growth. Upright plants with broad & soft leaves
- Maturity** : 45 days after sowing
- Specification** : Shiny dark green colour, late bolting, good in taste. Multi-cut variety, good for cooking & can be eaten raw as salad. High temp. tolerance & resistant to fungal diseases

SWATI

- Plant type** : Vigorous, strong vines
- First picking** : 40 days after sowing
- Fruit** : 80-90 gms. in weight, dark green in colour, round in shape
- Specification** : High yield with good transportation capacity

R.K.-5404

- Vine length** : 175-225 cm.
First picking : 45-48 days after sowing
Fruit length : 20-25 cm.
Fruit thickness : 4.5-5 cm.
Fruit colour : Medium green
Specification : Good in taste, high yield and good storage capacity. High tolerance to high temperature & humidity. This hybrid can be successfully grown during rainy season

R. K.-180

- Vine length** : 175-225 cm.
First picking : 40-42 days after sowing
Fruit length : 20-25 cm.
Fruit thickness : 4.5-5 cm.
Fruit colour : Medium green
Specification : Good in taste, high yield and good storage capacity

VICTORY-555

- Vine length** : 175-225 cm.
First picking : 40-42 days after sowing
Fruit length : 20-25 cm.
Fruit thickness : 4.5-5 cm.
Fruit colour : Medium to dark green
Specification : Good in taste, high yield and good storage capacity. Excellent tolerance to virus & high temperature. Fruit shape & size is very attractive. Good shining

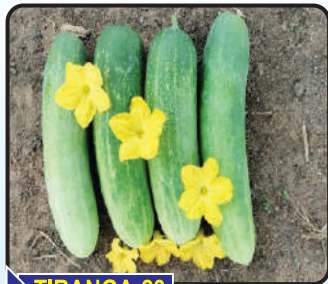

SUCHITRA-35

- Vine length** : 175-225 cm.
First picking : 40-42 days after sowing
Fruit length : 20-25 cm.
Fruit thickness : 4.5-5 cm.
Fruit colour : Medium green
Specification : Good in taste, high yield and good storage capacity

SIMMBA

- Plant type** : Early maturity, vine length 175-225 cm, bieta alpha, all female flowers, short internodes, multiple fruiting
First picking : 35-38 days after sowing
Fruit : Cylindrical shape, very high quality, 18-20 cm. length, 180-200 gm weight, shiny dark green colour
Specification : Seedless variety, good in taste, high yield and good storage capacity

TIRANGA-23

- Plant type** : Very early maturity, vine length 140-150 cm, high female flowers, short internodes, multiple fruiting
First picking : 32-35 days after sowing
Fruit : Cylindrical shape, very high quality, 16-18 cm. length, 160-180 gm weight, shiny green colour
Specification : Desi type, good in taste, high yield and good for distant transportation.

DHAMAKA-333

- Maturity** : 32-36 days after sowing
Root : Smooth surface with white colour from top to bottom, good in taste
Sowing time : March-September
Specification : Uniform length, very smooth and high yielder. Spinach like leaves, which are edible

RAPID-32

- Maturity** : 32-35 days after sowing
Root : Smooth surface with white colour from top to bottom, good in taste
Sowing time : March-September
Specification : Uniform length, very smooth and high yielder. Spinach like leaves, which are edible

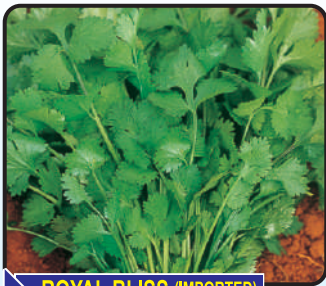

KOREAN CROSS

- Maturity** : 40-45 days after sowing
Root : Smooth surface with white colour from top to bottom, good in taste
Sowing time : Round the year (Except Dec., Jan., Feb.)
Specification : Uniform length, good field holding capacity. Smooth, good weight and high yielding

BASANT MAGIC

- Maturity** : 60-65 days after sowing
- Root** : Smooth surface with white colour from top to bottom, good in taste
- Sowing time** : Dec. to Feb.
- Specification** : Uniform length, good field holding capacity. Smooth, good weight and high yielding. Highly resistant to bolting

ROYAL BLISS (IMPORTED)

- Plant type** : Early maturity
- Maturity** : 50 days after sowing
- Sowing time** : Round the year
- Specification** : Broad leaves, multi-cut, good fragrance. Sowing can be done throughout the year. Very slow bolting

RED BEAUTY

- Time of sowing** : Sep. - Oct.
- Days to maturity** : 80-90 days
- Root height** : 35-40 cm.
- Root weight** : 150-200 gms.
- Root colour** : Deep red with red core
- Specification** : Very sweet in taste, without fibre. Good tolerance to virus

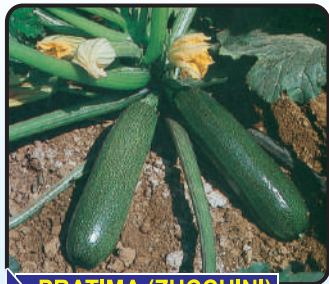

LUIS

- Plant type** : Early maturity, high yielding
Fruit colour : Light green
Fruit weight : 100-120 gms.
Specification : Good fruit yield, good in taste & seed development is very slow. Also suitable for summer cropping

R. K.-159

- Plant type** : Early maturity, high yielding
Fruit colour : Light green
Fruit weight : 110-140 gms.
Specification : Good fruit yield, good in taste & seed development is very slow. Also suitable for summer cropping

PRATIMA (ZUCCHINI)

- Plant type** : Early maturity, high yielding.
 Semi bush type plant
Fruit colour : Dark green
Fruit : 25-35 cm. in length & weighs about 300-400 gms.
Specification : Good fruit yield, good in taste & seed development is very slow. Also suitable for summer cropping. Good tolerance against virus

R. K.- 786

- Plant type** : Long vines and early maturity
- First picking** : 60-65 days after sowing
- Fruit** : Dark green in colour, erect and neckless
- Fruit weight** : 500-750 gms.
- Fruit length** : 30-40 cm.
- Specification** : Fruits are suitable for distant transportation. Suitable for summer as well as rainy season

SUMITRA-45

- Plant type** : Long vines and early maturity
- First picking** : 60-65 days after sowing
- Fruit** : Dark green in colour, erect and neckless
- Fruit weight** : 600-700 gms.
- Fruit length** : 35-40 cm.
- Specification** : Fruits are suitable for distant transportation. Suitable for summer as well as rainy season

BANGLA BANDHU

- Plant type** : Healthy green foliage leaves
- First picking** : 50-55 days after sowing
- Fruit** : Cylindrical in shape with fruit tapering towards stalk end, dark green in colour with white spots, fruit length 40-45 cm., uniform fruit size
- Fruit weight** : 1-1.3 kgs.
- Specification** : Very good disease tolerance. High productivity & bearing of fruits continue for long duration

VARDAN

- Plant type** : Long branches and early maturity
- First picking** : 60-65 days after sowing
- Fruit** : Cylindrical in shape with green colour, fruit length 35-45 cm.
- Fruit weight** : 500-750 gms.
- Specification**: Fruits are suitable for distant transportation. Good storage capacity. Suitable for summer as well as winter season

LAKSHMAN

- Plant type** : Long vines and early maturity
- First picking** : 60-65 days after sowing
- Fruit** : Dark green in colour, erect and neckless
- Fruit weight** : 500-750 gms.
- Fruit length** : 30-40 cm.
- Specification** : Fruits are suitable for distant transportation. Suitable for summer as well as rainy season

RAM

- Plant type** : Long vines and early maturity
- First picking** : 60-65 days after sowing
- Fruit** : Dark green in colour, erect and neckless
- Fruit weight** : 500-750 gms.
- Fruit length** : 30-40 cm.
- Specification** : Fruits are suitable for distant transportation. Suitable for summer as well as rainy season

RINI

- Vine length** : 4-5 meter
First picking : 50-55 days after sowing
Fruit shape : Bulb shape (Lattu type)
Fruit weight : 400-600 gms.
Specification : Very nice green colour and very good shine. Good in taste, high quality and high storage capacity

PRIYA (LATTU)

- Vine length** : 4-5 meter
First picking : 55-60 days after sowing
Fruit shape : Like a bulb
Fruit weight : 500-700 gms.
Specification : Good in taste, high quality and high storage capacity

CHAKRA

- Plant type** : Early maturity, high fruiting
Maturity : 60-65 days after sowing
Fruit : Round in shape, shiny green colour and smooth surface
Fruit weight : 500 to 750 gms.
Specification : High fruiting, good in taste and seed maturity is very slow. Suitable for summer season also

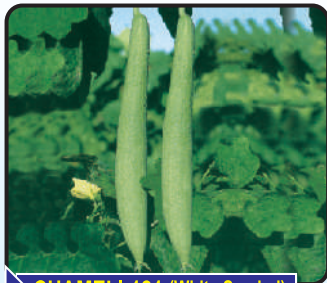

TRILOK-612

- Plant type** : Long vines with good branching
- First picking** : 50-55 days after sowing
- Fruit shape** : Long and cylindrical in shape, dark green in colour & smooth surface
- Fruit length** : 15-20 cm.
- Fruit weight** : 75-100 gms.
- Specification** : Suitable for both seasons. Good storage and transportation capacity. High yielding, excellent variety

SHILPA-611

- Plant type** : Long vines with good branching
- First picking** : 50-55 days after sowing
- Fruit** : Long and cylindrical in shape, dark green in colour & smooth surface
- Fruit length** : 15-20 cm.
- Fruit weight** : 75-100 gms.
- Specification** : Suitable for both seasons. Good storage and transportation capacity. High yielding, excellent variety

CHAMELI-121 (White Seeded)

- Plant type** : Long vines with good branching
- First picking** : 50-55 days after sowing
- Fruit** : Long and cylindrical in shape, light green in colour and smooth surface
- Fruit length** : 20-25 cm.
- Fruit weight** : 100 to 125 gms.
- Specification** : Suitable for both seasons. High storage ability and good for transportation. High yielding

MANALI-64

- Plant type** : Early maturity, fruiting remains for a long period.
Large canopy
- First picking** : 60-65 days after sowing
- Fruit** : Attractive fruit, long & straight, dark green in colour, unequal spikes, white flesh with slow seed maturity
- Fruit length** : 25-30 cm.
- Fruit weight** : 140-160 gms.
- Specification** : Good for distant transportation

SHAUKEEN

- Plant type** : Strong and long vines
- First picking** : 60-65 days after sowing
- Fruit** : Shiny dark green in colour with smooth or very little teeth
- Fruit weight** : 180-200 gms.
- Fruit length** : 40-45 cm.
- Specification** : Sowing can be done in both seasons. Good for long distance transportation

ANUJ-1513

- Plant type** : Early maturity, fruiting remains for a long period.
Large canopy
- First picking** : 50-55 days after sowing
- Fruit** : Attractive fruit, small size, dark green in colour
- Fruit length** : 8-10 cm.
- Fruit weight** : 20-25 gms.
- Specification** : Good for distant transportation

RUPALI

- Plant type** : Early maturity, fruiting remains for a long period.
Large canopy
- First picking** : 60-65 days after sowing
- Fruit** : Attractive fruit, long and straight, dark green in colour, unequal spikes, white flesh with slow seed maturity
- Fruit length** : 25-30 cm.
- Fruit weight** : 140-160 gms.
- Specification** : Good for distant transportation

JAISHREE

- Plant type** : Early maturity, fruiting remains for a long period.
Large canopy
- First picking** : 60-65 days after sowing
- Fruit** : Attractive fruit, long and straight, dark green in colour
- Fruit length** : 22-24 cm.
- Fruit weight** : 120-150 gms.
- Specification** : Good for distant transportation

SAI-17

- Plant type** : Early maturity, fruiting remains for a long period.
Large canopy
- First picking** : 60-65 days after sowing
- Fruit** : Attractive fruit, medium long, smooth surface, green in colour
- Fruit length** : 15-20 cm.
- Fruit weight** : 120-140 gms.
- Specification** : Good for distant transportation

CHAKAI NO. 1

Time of sowing : Nov. to March
 Veg. flowering : Heavy
 First picking : 70-80 days after sowing
 No. of fruits : 7-8
 Fruit shape : Flattish round, molted
 green colour
 Average fruit wt. : 4-5 kgs.

APSARA

Time of sowing : Nov. to March
 Veg. flowering : Heavy
 First picking : 70-80 days after sowing
 No. of fruits : 7-8
 Fruit shape : Flattish round in shape,
 dark blackish green outer
 rind
 Average fruit wt. : 4-5 kgs.

DHOLAKIYA

Time of sowing : Nov. to March
 Veg. flowering : Heavy
 First picking : 70-80 days after sowing
 No. of fruits : 4-5
 Fruit shape : Elongated
 Average fruit wt. : 8-10 kgs.

GEMINI-196

- Time of sowing** : Nov. to March
Veg. flowering : Heavy
First picking : 70-80 days after sowing
No. of fruits : 9-10
Fruit shape : Flattish round, molted green colour
Average fruit wt. : 2.0-2.5 kgs.

RED HORSE

- Plant type** : Early maturity, vigorous & erect plant with broad leaves
Maturity : 70 days after sowing
Root : Dark red root, free from white rings, round shape
Average wt. : 200-250 gms.
Specification : Suitable for long time storage & resistant to fungal diseases

R. K.-777

- Plant type** : Medium maturity, vigorous & erect plant with broad leaves
Maturity : 72-75 days after sowing
Root : Deep red root, free from white rings, round shape
Average wt. : 175-225 gms.
Specification : Suitable for long time storage & resistant to fungal diseases

SRISHTI-59

- Plant type** : Early maturity, hard, extension branching and good fruiting
- First picking** : 80-90 days after sowing
- Fruit** : Medium size, elongated in shape, green in colour, white powder on fruits
- Average fruit wt.** : 10-12 kgs.
- Specification** : Suitable for distant transportation

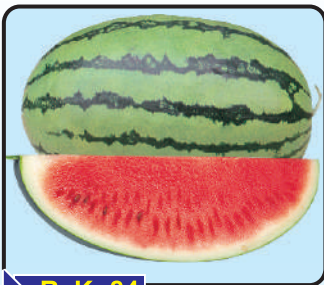

GANGA-63

- Plant type** : Early maturity, hard, extension branching and good fruiting
- First picking** : 70-75 days after sowing
- Fruit** : Medium size, elongated in shape, green in colour, white powder on fruits
- Average fruit wt.** : 4-6 kgs.
- Specification** : Suitable for distant transportation

R. K.-58

- Plant type** : Early maturity, hard, extension branching and good fruiting
- First picking** : 70-80 days after sowing
- Fruit** : Medium size, oblong round in shape, green in colour, white powder on fruits
- Average fruit wt.** : 8-10 kgs.
- Specification** : Suitable for distant transportation

R. K.-84

- Time of sowing** : Nov. to Feb.
- Plant type** : Vigorous growth with good strong vines
- No. of fruits/plant** : 3-4
- Fruit shape** : Oval
- Fruit colour** : Light green with dark green stripes
- Average weight** : 8-10 kgs.
- Pulp colour** : Blood red
- Sweetness** : Very sweet in taste
- Specification** : Tolerance from fusarium wilt and Anthracnose

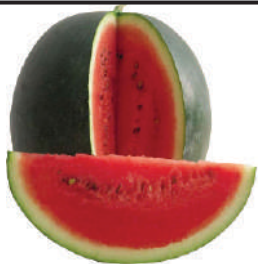

R. K.-2145

- Time of sowing** : Nov. to Feb.
- Plant type** : Vigorous growth with good strong vines
- No. of fruits/plant** : 3-4
- Fruit shape** : Oval
- Fruit colour** : Light green with dark green stripes
- Average weight** : 8-10 kgs.
- Pulp colour** : Blood red
- Sweetness** : Very sweet
- Specification** : Tolerance from fusarium wilt and Anthracnose.
Small seed hybrid

RAMJAN

- Time of sowing** : Nov. to Feb.
- First picking** : 70-75 days after sowing
- No. of fruits/plant** : 4-5
- Fruit shape** : Oblong
- Fruit colour** : Blackish green
- Average weight** : 3-4 kgs.
- Pulp colour** : Dark red
- Sweetness** : Very sweet
(12-13° Bricks)
- Specification** : Excellent for distant transportation

BLACK MAGIC

- Plant type** : Good growth with strong vines
- First picking** : 70 to 75 days after sowing
- No. of fruits/plant** : 4-5
- Fruit shape** : Oblong
- Fruit colour** : Blackish green with Blood red pulp
- Average weight** : 4-5 kgs.
- Sweetness** : Very sweet
- Specification** : High yield potential. Wilt tolerant & excellent long distance transportation ability

BURFI-34

- Time of sowing** : Nov. to March
- Fruit picking** : 65-70 days after sowing
- No. of fruits/plant** : 5-6
- Fruit shape** : Flattish round
- Fruit colour** : Yellow with green stripes
- Average weight** : 700-800 gms.
- Pulp colour** : Bright orange
- Sweetness** : Very sweet (12-13° Bricks)
- Specification** : Excellent for distant transportation

R. K.-325

- Plant type** : Early maturity, hard & vigorous branching and good fruiting
- First picking** : 60-65 days after sowing
- Fruit** : Medium long, whitish green in colour, length 40-45 cm.
- Specification** : Suitable for distant transportation
