HYDRA-STONE™

Dye Stain

HYDRA-STONE™ Dye Stain is engineered to deeply penetrate concrete or polymer modified cementitious materials to add color to concrete floors and surfaces without the frustration of acid stain or failure of waterborne stains and paints.

HYDRA-STONE™ is available as a concentrated liquid which can be reduced for additional color options either using HYDRA-STONE™ Reducer (for a slower dry and deeper penetration) or acetone. Also available as HYDRA-STONE™ Powder Pack (concentrated powdered version) for decreased shipping cost.

Powder Packs are simply added to HYDRA-STONE™ Reducer (for a slower dry time and deeper penetration, ideal for polished concrete) or acetone (for a super fast dry time with less penetration).
