HueNova WeatherShield Paint – Exterior Defense Layer

Where Screeding Putty stabilizes the wall, HueNova WeatherShield Paint acts as the external armor.

Core Protection Functions:

1. Rain & Moisture Defense

Hydrophobic film reduces water absorption
Prevents penetration during heavy rainfall

2. UV Resistance

Reflects solar radiation
Minimizes fading, chalking, and surface degradation

3. Anti-Weather Degradation

Maintains color integrity
Protects against surface erosion over time

☀️ **Result:** Exterior walls that withstand Nigeria's harsh weather without premature failure.

HueNova Premium Matt

Low reflectivity for a smooth, modern finish
Helps conceal minor wall imperfections

Ideal for residential and commercial interiors and exteriors

☀️ **Focus:** Clean look + subtle durability

HueNova Screeding Putty – Foundation for Wall Protection

HueNova Screeding Putty is the base layer of the system, engineered to stabilize and prepare wall surfaces before painting.

HueNova Satin

Slight sheen for enhanced light reflection

More resistant to stains and cleaning
Suitable for high-traffic areas

☀️ **Focus:** Balance between beauty and washability

HueNova Emulsion

Cost-effective and reliable coverage
Breathable coating to manage internal moisture
Suitable for large-scale residential applications

☀️ **Focus:** Scalable protection for everyday buildings

FURTHER FROM HUENOVA

HueNova Premixed Tile Grout Filler is a ready-to-use, high-performance grout solution designed for both professionals and modern DIY users who demand speed, consistency, and durability.

Unlike traditional grout that requires mixing, measurement, and technical handling, HueNova delivers a factory-controlled premixed formulation—eliminating guesswork and ensuring uniform performance across every application.

Water-Resistant Performance (Critical Benefit)

Once cured, HueNova Grout Filler forms a water-repellent barrier within grout lines:

HueNova Tile & Grout Sealer is an advanced surface protection solution engineered through molecular-level technology to address one of the most persistent failures in tiled environments: **porosity**.

Key Performance Benefits

1. Total Water Repellency

- Prevents water absorption through grout lines
- Reduces seepage into underlying structures
- Ideal for constant wet exposure areas
- Critical for bathrooms, swimming pools, and terraces

HueNova Concrete Latex – Performance Admixture for Stronger Concrete & Mortar

HueNova Concrete Latex is a high-performance polymer admixture engineered to enhance the structural integrity, bonding strength, and water resistance of both **concrete and plastering mortar**.

Developed in line with HueNova's mission of delivering durable wall and structural protection systems for Nigerian buildings, this product is designed to address common site challenges such as cracking, weak bonding, and moisture penetration.

Colour Psychology

Choosing the right colour scheme requires an understanding of the effect of colours on human. Colours are known to influence human, set a mood, create an impression and deliver meaning. This section helps you to blend colour schemes that infuse into your personality, make a statement on your walls and create exceptional impressions with Berger Paints.

COLOUR WHEEL

Colour wheel is a schematic representation of how colours relate to each other. It is used by colour professionals to choose the right mix of colours for any project. Colours in the wheel are categorized into:

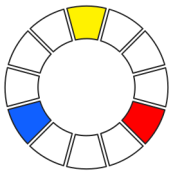

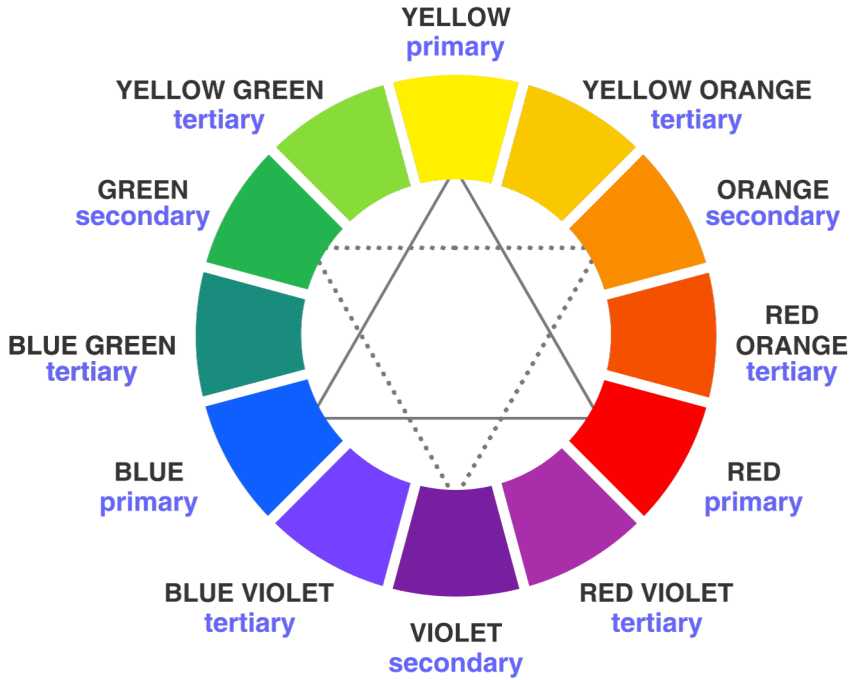

Primary Colours: These are referred to as basic colours and they are: Red, Blue and Yellow.

Secondary Colours: These are produced by mixing two primary colours together and they are: Green, Orange and Purple.

Tertiary Colours: These are combination of primary and secondary colours and they are: Red-Orange, Yellow-Orange, Yellow-Green, Blue-Green, Blue-Violet and Red-Violet.

These colours are combined to create colour harmonies based on the following schemes:

- **Complimentary Colours:** They are colours found on the opposite side of the colour wheel. (e.g Orange and Blue)
- **Analogous Colours:** They are colours next to each other on the colour wheel. (e.g Blue and Green)
- **Triadic Colours:** They are three colours that are equally spaced forming an equilateral triangle around the colour wheel. This provides a nice contrast and great colour balance. (e.g Yellow, Red & Green)
- **Split Complimentary:** These are colour schemes created when one colour paired with two colours on either side of the original colour (e.g. Yellow, Red-Violet and Blue-Violet).

PRIMARY
YELLOW
RED

BLUE GREEN
YELLOW GREEN

Colour Schemes

Triadic Colour Scheme

A triadic colour scheme uses colours that are evenly spaced around the colour wheel.

Complimentary Colour Scheme

Colours that are opposite each other on the colour wheel are considered to be complementary colours.

Rectangle (tetradic) Colour Scheme

The rectangle or tetradic colour scheme uses four colours arranged into two complimentary pairs.

Square Colour Scheme

The square colour scheme is similar to the rectangle, but with four colours spaced evenly around the colour circle.

Analogous Colour Scheme

Analogous colour schemes use colours that are next to each other on the colour wheel.

Split Complementary Colour Scheme

The split-complementary colours scheme is a variation of the complementary colour scheme. In addition to the base colour, it uses the two colours adjacent to its complement.
