

VERIFY IN ~30 SECONDS

Judgement Spine - Defensible Execution Evidence Pack (Public)

1. Unzip the bundle.
2. Open START_HERE.html (optional) to navigate.
3. From the root folder, run:

```
python verify_manifest.py
```

Expected output:

PASS (hashes + signature verified).

What this verifies

- Every file hash listed in manifest.json (SHA-256)
- manifest.json hash matches manifest.sha256
- signature.sig verifies against public_key.pem (when cryptography or OpenSSL is available)

If you are reviewing for procurement / audit

Retain: manifest.json, manifest.sha256, signature.sig, public_key.pem, and the verifier output as part of the audit or dispute file.
