

Judgement Spine - Category in One Slide

Execution-time authority for AI and automation. Proof exists before consequence.

Judgement Spine (Execution-time Control Plane)

Judgement Engine -> Outcome (ALLOW / ALLOW WITH BOUNDS / ESCALATE / BLOCK / SAFE DEGRADE)

Execution Control Plane -> Enforces bounds at the last safe moment

Evidence Pack System -> Writes proof before consequence (authority, bounds, doctrine version, rationale, integrity)

- **The AI shift:** decision-to-impact intervals collapse; probabilistic outputs become deterministic actions.
- **The failure mode:** authority drifts into runtime behaviour; accountability arrives after outcome.
- **The difference:** governance is enforced in the execution path, and exported as a proof object.
