Capital Spend - AI Procurement Acceleration

Suite: Financial & Commitment Authority Suite **World:** Capital Authority Governance **Outcome:** ESCALATE

What happened (execution intent)

Agent drafts a 2.8M USD purchase order marked urgent.

Status quo	Procurement drift becomes budget drift silently; spend authority bands are bypassed by speed.
AI shift	AI can generate vendor comparisons and commitments instantly; budget systems assume human pacing.
Judgement Spine difference	Judgement Spine governs spend authority at the commit boundary. If request breaches authority, it degrades to draft-only and returns ESCALATE: no PO issues until budget owner and security review approve; scope and time-boxed approvals are enforced.
Impact	Preserves capital velocity while preventing automated commitment drift; proof exists before issuance.

Decision summary

Outcome	ESCALATE
Bounds enforced	<ul style="list-style-type: none">- draft-only until approvals- budget confirmation required- vendor risk review required- dual approval
Escalation path	Route to budget owner + security approver. Auto-issue only after signed authority token.

Proof you can produce in 60 seconds

1. Open WOW_PACK/OPEN_ME.html (offline).
2. Select this scenario and click Replay (90 seconds).
3. Open Regulator View and Dispute Pack PDFs.
4. Run verify_manifest.py to confirm integrity (hashes + signature if available).

Evidence Pack ID: JSP-PUBLIC-20260302-CAPITAL_SPEN-0001 **Control plane demos:**
