Compliance - AI Boundary Crossing

Suite: Security & Integrity Suite **World:** Compliance Assurance Governance **Outcome:** SAFE DEGRADE

What happened (execution intent)

Workflow proposes exporting 1.2M EU customer records to an external vendor.

Status quo	DLP detects after transfer; audit discovers boundary crossing after the data is gone.
AI shift	AI systems generate, transform, and transmit data across jurisdictions at machine scale; one action can be irrecoverable.
Judgement Spine difference	Judgement Spine turns compliance into runtime gates. If purpose limitation, vendor approval, or region constraints fail, it returns SAFE DEGRADE: allow redacted export; hold full export for approval with a bounded request.
Impact	Prevents high-velocity compliance breaches while keeping teams moving inside permitted paths.

Decision summary

Outcome	SAFE DEGRADE
Bounds enforced	<ul style="list-style-type: none">- redacted export allowed- full export held- approval required for sensitive fields- audit-grade evidence before send
Escalation path	Route to data protection officer + vendor owner. If unacknowledged, keep full export blocked.

Proof you can produce in 60 seconds

1. Open WOW_PACK/OPEN_ME.html (offline).
2. Select this scenario and click Replay (90 seconds).
3. Open Regulator View and Dispute Pack PDFs.
4. Run verify_manifest.py to confirm integrity (hashes + signature if available).

Evidence Pack ID: JSP-PUBLIC-20260302-COMPLIANCE_A-0001 **Control plane demos:**
<https://judgementspine.com/control-plane-demos>

Note: This is a public, redacted, illustrative pack. The structural claim is about runtime authority, bounded autonomy, and proof written before consequence.
