Digital Identity - AI State Change Automation

Suite: Security & Integrity Suite **World:** Identity & Representation Governance **Outcome:** ALLOW WITH BOUNDS

What happened (execution intent)

Takedown request targets a high-profile account.

Status quo	Irreversible actions (deletion/takedown) happen under momentum; dispute-grade proof is missing.
AI shift	AI-driven moderation and identity actions can change public truth instantly; false positives become reputational incidents.
Judgement Spine difference	Judgement Spine governs identity actions before they become public truth. If evidence is not proof-grade, it returns ALLOW WITH BOUNDS: apply interim label, throttle reach, preserve evidence chain, and route full takedown to the right authority.
Impact	Stops abuse quickly without irreversible harm by momentum; decisions remain defensible under dispute.

Decision summary

Outcome	ALLOW WITH BOUNDS
Bounds enforced	<ul style="list-style-type: none">- interim label applied- reach throttled- evidence chain preserved- full takedown routed
Escalation path	Route to trust & safety lead / legal. Deletion requires explicit approval token and proof survivability checks.

Proof you can produce in 60 seconds

1. Open WOW_PACK/OPEN_ME.html (offline).
2. Select this scenario and click Replay (90 seconds).
3. Open Regulator View and Dispute Pack PDFs.
4. Run verify_manifest.py to confirm integrity (hashes + signature if available).

Evidence Pack ID: JSP-PUBLIC-20260302-DIGITAL_IDEN-0001 **Control plane demos:**
<https://judgementspine.com/control-plane-demos>

Note: This is a public, redacted, illustrative pack. The structural claim is about runtime authority, bounded autonomy, and proof written before consequence.
