

DISPUTE PACK

Digital Identity - AI State Change Automation

World: Identity & Representation Governance **Outcome:** ALLOW WITH BOUNDS **Evidence Pack ID:** JSP-PUBLIC-20260302-DIGITAL_IDEN-0001

1. What was claimed / requested

Takedown request targets a high-profile account.

2. What the system allowed vs blocked

Allowed

- Automation proceeds inside explicit bounds.
- Reversible mitigations permitted.
- Escalation wired if confidence drops.

Blocked

- Any irreversible action outside bounds.
- Any execution without required evidence or authority.

3. Why (governance rationale)

Judgement Spine governs identity actions before they become public truth. If evidence is not proof-grade, it returns ALLOW WITH BOUNDS: apply interim label, throttle reach, preserve evidence chain, and route full takedown to the right authority.

This pack is designed to survive dispute: it links decision, authority, bounds, and integrity in one exportable object.

Evidence references

4. Evidence signals

- report_provenance
- confidence_score
- collateral_impact_estimate
- account_reach
- evidence_pack_survivability
- authority_owner

5. Evidence artefacts in this bundle

policy_trace.ndjson	Which doctrine checks fired and why.
audit_export.ndjson	Execution-time event record.
provenance_chain.json	Illustrative provenance and chain integrity.
authority_contract.json	Named authority + bounds contract.
manifest.json + signature	Integrity references (tamper-evident).

6. Integrity verification

Run `verify_manifest.py` from the root folder and retain the output as part of the dispute file.

If the hashes and signature verify, the pack is unmodified since it was sealed.
