

Pg 198

(94)

$$\sqrt{f(-2,5) - f(1,9)} - [f(\pi)]^2 + f(-3) \div f(1) \cdot f(-\pi)$$

$$\sqrt{(2) - (-2)} - [-4]^2 + (2) \div (-2) \cdot (3)$$

$$\sqrt{4} - 16 - 3 = -17$$

⑪⑫ Find $f(3.5)$ then explain.

When a package is 3.5oz it will cost \$1.15

⑪⑭ A package weighing 1.8oz will cost \$0.71
