

OFFICIAL WHITEPAPER VERSION 2.0

Disclaimer:

Please read all the terms and conditions ("T & Cs") carefully. By making a contribution to Stellargold® for purchase of Stellargold® tokens ("XLMGOLD") during the token sale you will be bound by all our terms and conditions.

If you do not agree to our terms and conditions please do not make any contributions to our token sale. Stellargold® Incorporation is a company registered under Indian Government under the ministry of medium and small scale industries.

This document is for informational purposes only and does not constitute an offer or solicitation to sell shares or securities in Stellargold® or any related or associated company. Any such offer or solicitation will be made only by means of a confidential offering memorandum and in accordance with the terms of all applicable securities and other laws. The information set forth in this White Paper may not be exhaustive and does not imply any elements of a contractual relationship. The content of this White Paper is not binding for Stellargold® ("Stellargold® Company" or "Stellargold®") and its affiliates and reserves the right to change, modify, add, or remove portions of this White Paper for any reason at any time before, during and after the sale of Stellargold®.

Prior to acquiring the Stellargold®, a prospective purchaser should consult with his/her own legal, investment, tax, accounting, and other advisors to determine the potential benefits, burdens, and other consequences of such transaction. Nothing in this White Paper shall be deemed to constitute a prospectus of any sort or a solicitation for investment, nor does it in any way pertain to an offering or a solicitation of an offer to buy any securities in any jurisdiction. This document is not composed in accordance with, and is not subject to, laws or regulations of any jurisdiction which prohibits or in any manner restricts transactions in respect of, or with use of, digital tokens.

The English language White Paper is the primary official source of information about the project. The information contained in English language White Paper may from time to time be translated into other languages. In the course of such translation some of the information contained in the English language White Paper may be lost, corrupted or misrepresented. The accuracy of such alternative communications cannot be guaranteed. In the event of any conflicts or inconsistencies between such translations and the official English language White Paper, the provisions of the English language original document shall prevail.

Investment in digital currencies are subjected to market risks and hence read all the business related documents before making a contribution to Stellargold®.

Introduction:

Decentralized exchanges offer a non-custodial, trustless and improved transparency in holding and sharing ledgers. Despite these technologies the transactions in blockchain is held with the help of miners. Stellargold is a cloud cryptomining platform that educates people on mining and insists them to mine the best cryptocurrency which can earn them a huge profit. By making a contribution in Stellargold® or by holding Stellargold® tokens you can become a member of our mining farm. Stellargold will be used to mine more than 500 cryptocurrencies at our mining farm (It will also be integrated to lot of decentralized cloud mining platforms as a part of miner fees)

The Stellargold® mining farm works on the principle of cloud mining but unless like other mining farms we won't ask you to buy the hashpower and get profit from what you have invested. In Stellargold mining farm the total hash power will be divided among the miners and according to their investment of Stellargold® tokens the profits will be shared among the miners. This will even help our air droppers or small token holders to mine at our mining platform. The prime aim of Stellargold tokens is that it should enable mining a simpler process and a power efficient one. Stellargold is also working on producing low power consuming ASIC miners to carry out things. We are working on the world's smallest cryptomining device which can be as small as your mobile phone which consumes less power and can also compete with the large ASIC ones.

We also try to integrate our tokens to a small android mobile wallet and enable you to mine and earn with those Stellargold tokens which you HODL in your wallet. We are also working on mining cryptocurrencies by using a coupled mining technology or cascading miner technology and also by a specific scripts called as specific pool mining algorithm(SPMA©) and which is exclusive for Stellargold mining farm and it help the miners to get more profit than the existing ones. Unless like stellargold® is not only a mining token it also have various utilities in the crypto space. Stellargold mining farm is based on a anonymous process which is

based on cryptoanarchy which is main motto of cryptocurrency as suggested by in the primitive cryptocurrency whitepaper.

Features of Stellargold:

1. Fast
2. Secure
3. Anonymous
4. Transparency
5. Instant Remittance

Services being offered by Stellargold:

There are a total of three main services offered by Stellargold,

1. Cryptocurrency mining platform
2. Integrated bounty offering platform
3. ICO services platform

Cryptocurrency mining platform:

What is Stellargold® and how it alters the mining era?

Stellargold® is not only an ERC20 token and it has a scope which is beyond the understanding of common people. Stellargold® mining platform helps everyone to mine cryptocurrency without any ease or struggle. It also has been working to produce the world's smallest mining device which can mine bitcoins with just power equivalent of 2000 mah. Stellargold Photo Miner© is a patent device which is going to hit the market by early 2020. There have been a lot of difficulties in cryptocurrency mining; some of them are listed below

1. Losing money on fake mining sites
2. Number of minable cryptocurrencies
3. Not aware of cryptomining
4. Requirement of huge power supply
5. Requirement of proper cooling techniques
6. Cost of high quality cryptomining devices
7. Lack of knowledge in mining

These are some of the major problems the crypto miners are facing in their regular life. We Stellargold® have a solution to all these problems and can rectify the above discussed problems effectively and can make you more money out of cryptocurrency mining. First what are the uses of purchasing Stellargold® tokens and how it makes you a complete cryptocurrency miner?

Step 1: Let Bob be a cryptocurrency angel investor

He loves cryptocurrency mining but couldn't make anything huge except paying some huge electricity bill

Step 2:

He heard about Stellargold® and purchased 5000 Stellargold® tokens. Now he is a member of our cryptocurrency mining organization. Here we not only mine for you we also give you assistance in setting up your own ASIC miner and suggest you the profitable mining ways.

Step 3: Bob also mines profitably with the Stellargold tokens he have and also with his home PC and mobile phones.

Step 4: Soon if bob is well versed in crypto mining farm. He will be a senior member of our organization and can make advices to the community and make cryptocurrency mining an easier and easily accessible one for everyone.

Secondly about of **Stellargold® cryptocurrency mining organization (SCMO©)**

A person who has purchased more than \$25 worth of tokens at our ICO will be member of our organization initially and later there will be a membership fee after the end of ICO. Every member of our organization will be assisted in their mining activities. They will be actively performing in all cryptocurrency mining activities with Stellargold® and the main aim of this

organization is to make cryptocurrency mining easier and more accessible to poor people. So that they can mine cryptocurrencies and earn their daily income. The organization already comprised of a lot of electronics engineers who are working together to make the pocket size mining device which consumes power less than our mobile phones battery but could be able to mine at a rapid speed. The Stellargold Miner© is a device which uses light induced photon graphic mining technology for finding the blocks at a very rapid rate. The genuine ASIC miners use NOT gate for making the logics which are essentially the logic gates. But now stellargold miner device use photon based electron control method for controlling electrons for making profitable mining devices. The mechanism used in our stellargold miner devices is not simple and it consists of serious technological implementations and researches. We have been using lights of various wavelengths as a part of our testing purposes. Now we have been working with great young technologists across the globe to make this a reality.

Stellargold® mining farm:

What is a mining farm?

A mining farm is basically a place where cryptocurrencies are mined at a faster rate and in a rapid phase. Now those mining farm rent their miners and allow everyone to mine cryptocurrencies. Now Stellargold® is similar to those mining farms but why we don't accept any fiat payments or crypto payments for mining at our farm?

1. These currencies are subjected to KYC verifications and AML policies
2. These currencies aren't anonymous anymore
3. We need to be anonymous and stellargold is not only a currency for mining purpose.
4. We want to protect our consumer money and rights.

How to mine with stellargold® at our mining farm?

Step 1: Buy stellargold® tokens

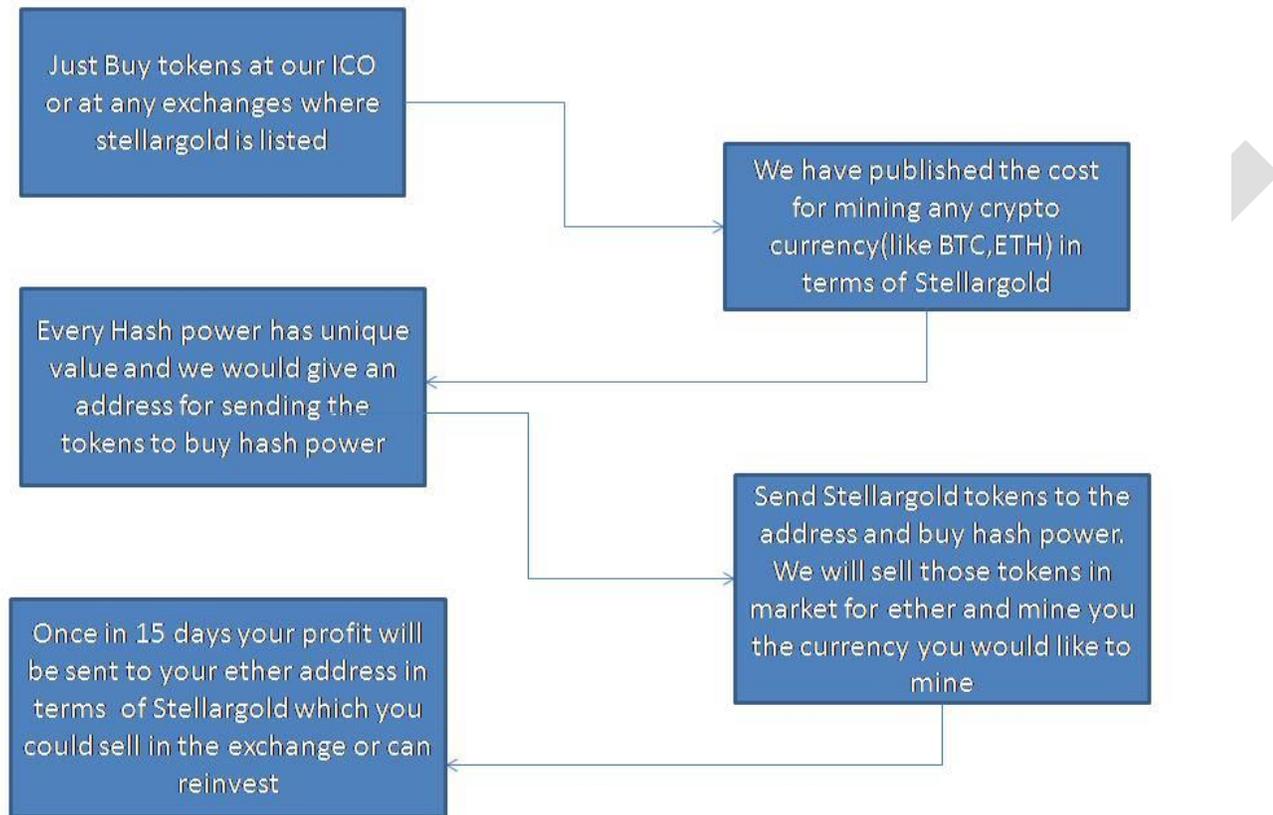

Step 2: Send those tokens to the mining pool address which will be an ethereum address (We sell those at market and convert it to ether/bitcoins to make up our power and other expense)

Step 3: After mining the total mined cryptocurrencies will again be spent at the exchange to buy stellargold tokens and will be divided to everyone equally based on their investment and

sent to their ethereum wallets. So that you can mine more and earn more without any information being shared with us.

Step 4: Hence stellargold will always have a buyer who is nothing but us. So our holders can get profit more and more and the tokens price will be held up by us and the market liquidity and volume will be maintained properly

How we are anonymous?

Results of our Beta Testing from our Innovative mining farm:

Product Prototype and beta version

Stellargold® mining farm initially enters the beta testing stage with 50 Sg Antminers and is being constantly tested for flaws and drawbacks. The farm comprised of more than 1 acre area situated on the main highway connecting two major cities and hence transportation of

employment and electricity can be done easily. Our miners are separated into 2 groups and a group

Consisting of 25 miners and each group have been connected to 4 mining(4 for BTC and 4 for ETH) pools and hence we can mine at 8 pools simultaneously and we use a special scripts called specific pool scripts which is an automated program that is monitoring the block difficulty of all the 8 pools at a time and it automatically connects the miners to the pool with less traffic and hence with less difficulty and we are also having another technology which we introduce called as coupled mining in which we are coupling or cascading a large of miners to the main system using a specific algorithm and hence the speed of finding new combination to unlock blocks is greatly increased

Observed Data from the past 25 days at our testing farm,

Without coupling mining profit per miner (including the electricity and labor charges) = \$10 per day (approx)

With Coupling of miners (including the electricity and labor charges) = \$12.37 per day

Without coupling with specific pool script = \$11 per day

With coupling with specific pool script = \$13.67 per day

Hence we can observe that from beta testing that we can increase the income from \$10 to \$13.67 which is nearly 30% increase and hence we can mine at the low cost we will deduct this cost from the miner fees. And also we adopt alternative resource strategy in which we exploit our geographic location completely for our power expense.

Aralvaimozhi - One of the largest wind farm in the world is located very near to our power plant and also by setting up solar power plants on an area of 5000 sq feet from which we can gain the power expense for our day time mining and during night we use the power from wind plant and we also sell the extra power from wind plants to local companies during day time and hence by doing so our power expense is nil for our miner which is a huge benefit for us. And our area is having moderate climate and air-conditioning is needed for maintaining the mining capacity of our miners and hence we adopt compression air-conditioning Technologies in which we use a new form of nitrogen isotope to keep our farm cool without any external cooling agent. And once sealed our miner farm will be under service only once in a year and during that time one farm will be maintained. And the other will be in function and hence there will be no downtime at the farm. There are 3 full time members monitoring .The

rate of mining and maintaining its function efficiently. And the major concern was the payouts and hence we decided to develop payout method called as Ex-Payout system in which the payouts are calculated for the whole i.e., If the total earning from the mining farm is 100 BTC per 15 days for say then

We can calculate your income by the formula,

$$\text{Total BTC mined} * \text{Hashpower you bought} / \text{Total Hashpower rented} = \text{Total BTC for your payouts}$$

And this BTC will be used to buy Stellargold Tokens at our market and are given to their respective ethereum wallet in terms of Stellargold tokens and you can sell those tokens in the market to get BTC/ETH and hence Stellargold becomes an utility token

Cost of Buying Bitcoins from Market = \$7000 (Say)

Cost of mining at other farms = \$4000 (Say)

Cost of mining at our farm = \$3700 (Say)

Hence these profits will be divided among all our miners and hence miners can earn 20% profit from our mining farm

With 50 miners we nearly got \$700 per day as per our current observations and we are trying hard to script a new mechanism

Called backdoor mining in which we can stop the mining of all devices at our mining farm and we can allow only our miners to mine at a pool. It is under development and once it is implemented we can mine Cryptocurrencies at 20% of their market rate.

Project Technical highlights:

1. Specific pool script
2. Coupled mining

Resources advantage:

1. Low cost power generation through wind farms and solar farms
2. Cheap Labor
3. Easy Transportation
4. High - Speed Internet with special Satellite communication

Hence Stellargold® is not only for mining at our mining farm. It will also make you a member at our organization and make you mine at your own home personal computers and also makes you to earn more with your available devices. It also make you to access the pocket sized mining device as small as your mobile phone which consumes less power and can mine effectively.

Motives of Stellargold as mining coin:

1. To become the only cryptocurrency for mining all cryptocurrency effectively by 2020
2. Help everyone mine cryptocurrency
3. Complete guidance on mining all cryptocurrencies
4. Increasing the total number of cryptocurrency miners
5. Reducing the gas fee
6. Making the world's smallest and efficient cryptocurrency device
7. Making mining a noble profession

What happens if Stellargold® Photo Miner hits the market?

It will replace all the existing mining devices. It will make mining done by photonic method of controlled hash technology. Actually it is still under development so we can't provide the complete idea. It will make mining bitcoins as easy as a piece of cake. It also helps mine with little power consumption.

Now about Stellargold bounty platform:

Stellargold bounty platform is a highly motivated non-profit platform aimed at making a source of regular income to people.

What is a bounty?

A bounty is form of free offering offered for the promotion of an ICO. It is usually offered by doing some tasks which helps in the promotion of the coin and also it get some people who are involved in bounty hunting to get a small amount of income. Now Stellargold Bounty platform also does the same it helps in the promotion of the projects collaborated at its bounty platform. But unlike other platforms Stellargold Bounty platform in unique and it has a clear model in achieving its required goal.

Background and Problems

Problem 1:

Large number of ICO's offering free airdrops worth just \$5 but asking about all KYC documents and this is the alarming cause for the establishment of such platform.

Solution:

Stellargold Bounty Platform prevents innocent airdroppers from exposing their identity to the corporate world for just a small worth of airdrops as in our bounty platform there are no KYC for Airdrops.

Problem 2:

The second problem we choose to solve is the poverty ruining the backward nations of the world. Nearly 40% of the world's population have their income below \$1.50.

Solution:

Stellargold Bounty Platform helps in getting people a small amount of income of about \$250 per month just by doing small tasks for getting some airdrops.

Companies doing ICO's are mostly from the technologically developed nations and hence we can convert the funds they invest in marketing into some sort of income for people who lives below poverty line.

Problem 3:

High cost for marketing. An ICO with a strong background and knowledge lacks the required marketing. Companies having poor ideas due heavy marketing reach a large community easily.

Solution:

Stellargold provides every company with a great idea of changing the world free marketing services to reach a larger community of population without any ease. We also provide you any technical assistance if needed and hence we help small companies to reach greater heights

Turning high marketing expenses into income for poor:

At an average a company spends nearly 20% on its investment in marketing. Now stellargold is a larger community and can help every projects reach a wider community easily and quickly. So stellargold aims at converting those marketing income into some sort of income for poor people. Stellargold will accept 0.5% of the total tokens value and lock it in its bounty platform and offer bounties in terms of stellargold tokens. Since stellargold will be listed and trading at exchanges the newer projects can get a wider reach without any investment and also the people getting airdrops will be overwhelmed if they can convert their airdrops into money

soon. We will also provide you with more telegram, twitter, facebook, sina weibo and medium followers through PR marketing and can reach a global community with specified targeted marketing. We also have links with a lot of global exchanges and can make your tokens list at any of these exchanges at a price lower than the normal listing fee and also we can arrange for exchange listing votes at a very few cost. We also do a marketing campaign through various means in our stores and merchants and help you to reach more. It is in the sense of a mutual symbiotic relationship between both the parties and also the air droppers.

Now **Stellargold ICO services platform:**

Stellargold ICO services platform aimed at providing cheaper and best ICO services to people who are ambitious to adopt blockchain for their business or to make their ideas into blockchain technology. We provide ICO services as cheap as \$200 and can provide you website and smart contract and everything.

Our range of ICO development services include

1. Whitepaper Drafting

Detailed and comprehensive whitepaper services to introduce your newly developed crypto coin to the market.

2. Roadmap & Strategy

Strategic time-based roadmaps to visualize the trajectory of the product and to help secure stakeholders.

3. Marketing

Thoroughly planned marketing solutions meticulously designed to keep your venture above the crowd.

4. Coin Development

Trusted and proven one-stop solution for secure, customized crypto coin Altcoin development services.

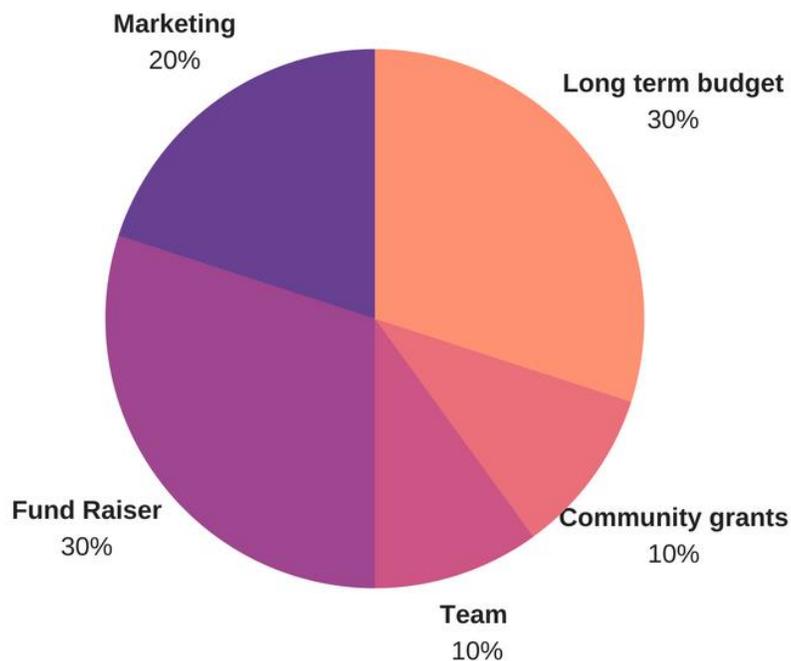

5. Blockchain Integration

Standardize, automate and secure platforms across various industries with customized Blockchain integration.

6. Support

dedicated support from our experienced experts in the initial stages to ensure a successful product launch.

STELLARGOLD TOKEN DISTRIBUTION

The tokens distribution will be used accordingly and will be designed for the purpose of maintaining long term goals.

Token Information:

Total Number of tokens	= 100 million
Token for ICO	= 20 million
Tokens per Each Phase of ICO	= 5 million
Decimal	= 18
Platform	= Ethereum (ERC20)

Cost of tokens in each phase

- 1st Phase = \$0.50 with 100% Bonus hence \$0.25
- 2nd phase = \$0.50 with 75% Bonus and hence \$0.32
- 3rd phase = \$0.50 with 50% Bonus and hence \$0.38
- 4th phase = \$0.50 with 25% Bonus and hence \$0.44

Utilities for Stellargold Tokens

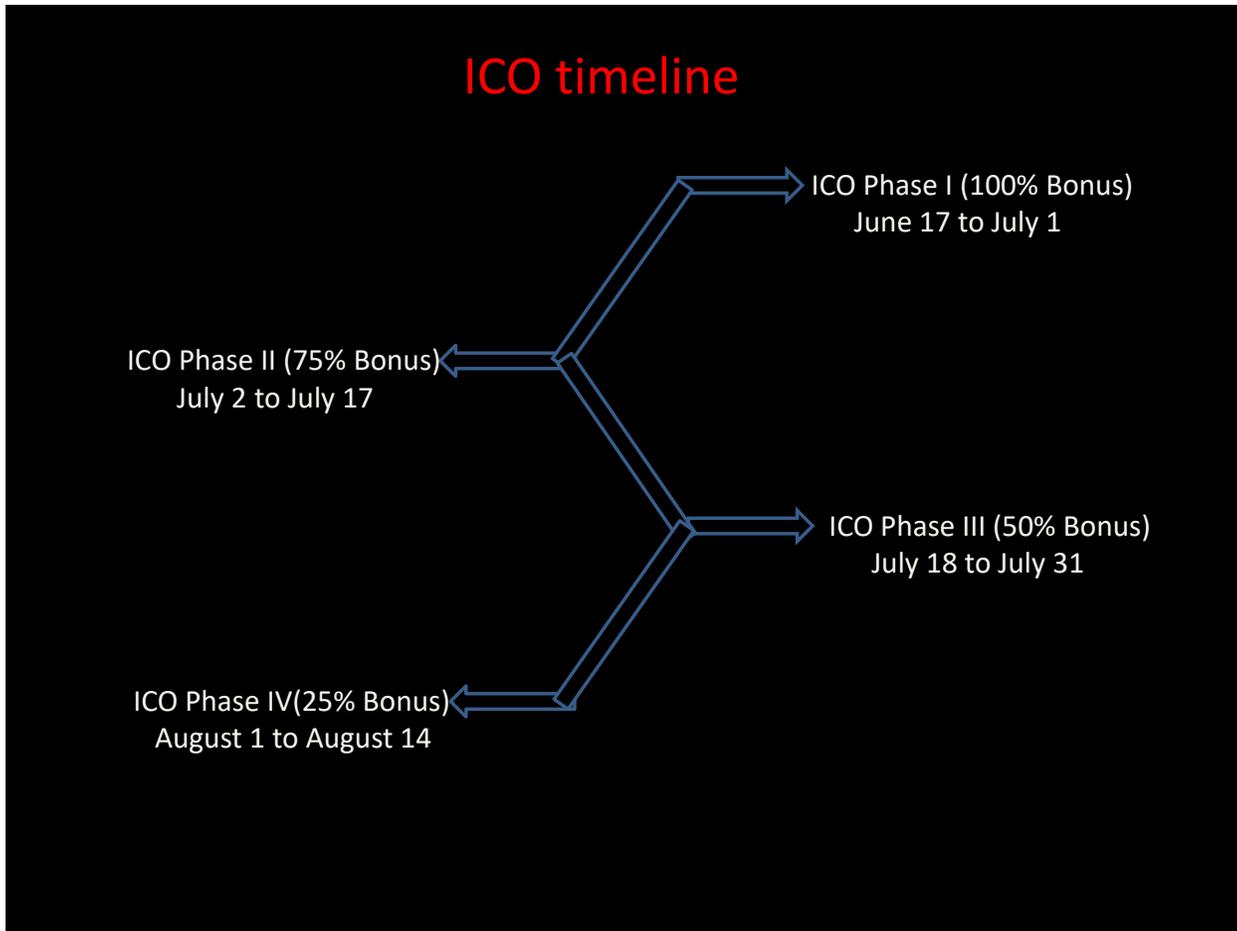

- Stellargold Mining farm
- Stellargold ICO services
- Stellargold Bounty Platform

ICO minimum contribution: \$10
ICO maximum contribution: \$10000

Currencies Accepted in ICO

1. Ether
2. Bitcoin
3. Litecoin
4. Doge
5. Fiat payments

6. And 50 other cryptocurrencies

After the end of ICO the ico services platform will accept only stellargold tokens to start an ico.
