SNAP-LOCK 1" X 12"

The FF100 1" Snap-Lock Standing Seam roofing panel with slotted flange is a concealed-fastener system that provides a clean and durable finish.

Backed by a 5-year workmanship warranty and a typical 40-year service life, it offers low maintenance and a refined appearance. While snap-lock systems generally cost more than screw-down panels and require careful handling during installation, they provide an excellent balance of performance and aesthetics for this building.

TURN-KEY SOLUTION

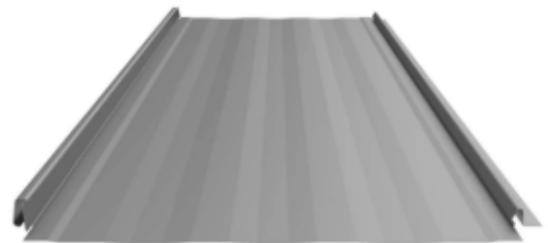

Produced with our on-site roll former, panels are available in 12" and 16" widths, 24 ga or 26 ga steel, and custom lengths from 3' to 48'.

Pricing includes a complete tear-off, on-site production and installation of a 26-ga SMP pre-painted (AAMA 2605-13) full-length standing seam system, a peel-and-stick weather barrier, underlayment, custom flashings, and all required hidden fasteners, hardware, and accessories.

COLOR & COATING OPTIONS

Looking for realistic woodgrain, weather resistant high gloss, or textured steel products? With a combination of 100+ colours and prints, we have your prepainted metal needs covered.

All custom orders and premium finish selections are subject to price adjustments and applicable freight charges. Actual color may vary from on-screen representation

NON-EXPOSED FASTENER

For Northern BC's harsh conditions—heavy snow, freeze-thaw cycles, and high winds—snap-lock standing seam is an excellent choice for both new construction and retrofits. It performs best on short panel runs, roof slopes of 3:12 or greater, and panel lengths up to 48 ft.

The smooth, concealed-fastener profile reduces wind turbulence and limits moss buildup, while the snap-together design allows faster installation and a clean, watertight finish.

OPTIONAL UPGRADES

In Northern BC's demanding climate, Snap-Lock standing seam metal roofing is a smart, long-lasting choice. Because the panels lock together without exposed fastener holes, there are no screws left open to weather, helping reduce leak risk over time.

Snap-Lock is built for performance, but it also delivers a clean architectural look with a wide range of color options to match your home or building.

Eavestrough, fascia, and soffit replacements are quoted separately.

CLAMP-STYLE SNOW RAILS

Continuous snow retention systems use aluminum rails clamped to standing seams with no penetrations, running the full length of the roof.

They control snow release to protect people, vehicles, and landscaping while allowing snow to melt gradually and drain into the gutters. The S-5! ColorGard system offers durable, color-matched protection and is often the preferred option for larger roofs when budget allows.

Standing Seam Metal Roof Clamps Snow guards are quoted separately.

SEAMLESS GUTTERS

Formed on-site with a specialized machine, seamless gutters are made in a single, custom-fit piece for your home, virtually seamless except at corners and downspouts. Their clean, continuous look enhances curb appeal, and with fewer joints to trap debris, they're less prone to clogs and require minimal maintenance.

Seamless Gutters are quoted separately.
