- Contact: Mark Engelen, CEO - mark@rxlive.com

nQ Medical, Inc

- nQ is a computational biotechnology company that captures digital phenotyping through passive, AI-aided analysis of personal device interactions. It is NOT a wearable nor a task-based app. It has developed digital biomarkers for a range of neuromotor and neurocognitive disorders in early and newly diagnosed/untreated stages of disease, serves a remote monitor of disease progression, and can measure therapeutic efficacy of drug, device, or other intervention.

nQ was awarded Breakthrough Status by the FDA in November 2019

NetraMark Corp

- Many high value ML problems across a broad range of industries are data bound and traditional big data and deep learning methods offer little to no utility. At NetraMark we have a developed a next generation interactive machine intelligence platform that is helping pharma and biotech companies create therapeutic breakthroughs by redefining the way we see disease. Our system generates hypotheses through a unique unsupervised machine intelligence algorithm that allows scientists to significantly reduce R&D overhead and to optimize clinical trials.
