R32 Solutions

R32 supports organizations operating in complex, regulated, and mission-critical environments by bringing clarity, structure, and confidence to enterprise technology, cybersecurity, compliance, and digital risk — including the responsible governance of Artificial Intelligence, Business Intelligence, and analytics.

R32 is an independent, veteran-led advisory firm with deep experience across federal, healthcare, critical infrastructure, and highly regulated industries. We do not act as auditors, regulators, or system operators. We help leaders understand risk, prioritize what matters, and strengthen resilience without unnecessary disruption.

What R32 Solutions Does

R32 Solutions provides practical, strategic, and hands-on advisory support across enterprise technology, cybersecurity, compliance, and digital risk. Our core areas of support include cybersecurity risk management, secure cloud and infrastructure modernization, governance and policy alignment, audit-ready security architecture, and the responsible oversight and governance of Artificial Intelligence (AI), Business Intelligence (BI), analytics, and automated decision systems.

How R32 Solutions Supports Organizations

Technology and security leaders often balance operational uptime, cybersecurity risk, regulatory pressure, staffing constraints, and executive expectations at the same time. In many organizations, leaders and teams are dual- or triple-hatted—carrying strategic, technical, and compliance responsibilities simultaneously.

R32 Solutions works alongside executive and technical leadership to provide clear, actionable guidance that helps organizations focus on the right priorities, reduce uncertainty, and strengthen security and compliance posture without overwhelming internal teams. Our support brings structure and confidence to technology decision-making—so limited time and resources are applied where they deliver the greatest impact.

Why This Matters Now

Organizations face increasing technology complexity, escalating cybersecurity threats, and evolving regulatory expectations—all while operating with constrained budgets and limited specialized talent. Many leaders are unsure whether their current approach is sufficient or defensible under scrutiny.

R32 Solutions applies a federal-grade approach to technology, cybersecurity, and compliance—bringing disciplined structure, consistency, and defensibility to enterprise environments. This enables organizations to identify gaps early, modernize securely, and move forward with confidence.

Client Engagement Model

R32 Solutions supports organizations through targeted assessments, strategic advisory engagements, and ongoing concierge-level support across cybersecurity, compliance, and digital risk — including the governance and oversight of Artificial Intelligence (AI), Business Intelligence (BI), and analytics.

Clients may engage R32 Solutions for focused advisory services or expanded, fee-based engagements tailored to their operational, regulatory, technology, and risk profiles.
