Product and Equipment Research

Finding the right safety equipment and clothing is crucial in workplaces to help protect employees from workplace hazards and reduce the risks a FED/OSHA OR CAL/OSHA Situation. It is the responsibility of the employers and workers to ensure that they use the correct safety clothing and equipment while working. Given the pressure that comes with buying the right and most cost effective safety equipment, this can be very challenging.

The most important step before buying safety equipment is assessing the hazards around the workplace to decide what the correct product is needed to reduce workplace hazards.

You need to be open-minded and understand the effects of each hazard. This process needs the collaboration of different people as this will make it easier to identify these hazards and decide on the right safety clothing and equipment to get for employees. It is important to include an independent contributor who doesn't work for the supplier so that he or she can provide an unbiased solution.

DVBE Risk Management can help with workplaces assessments and ensure the manufacturer has used the finest material, quality in the manufacture of the safety equipment and clothing that meets ANSI as well as OSHA Standards and most of all is cost effective pricing.
