

MISSION STATEMENT & CONTACT INFORMATION

From Autos to Ornaments, from Products to Painting, It all starts with an idea and a sketch.

Drawing is the first step to all creativity for me. It is a means to convey an idea, a thought, an emotion, a visual concept to the future or the past.

From concept sketches to final renderings then to mechanical drawings: this is the process of product designing.

My life's desire was to draw! Starting with the Automobile industry, my passion to draw has taken my design career into diversified avenues of materials, products, industries, places and purpose. The only way I can describe it is...The excitement of seeing and drawing reflections in metal, crystal and chrome (shapes & shadows) gives me an adrenaline high...or as many automobile designers have said they have "gasoline in their blood".
