

Tech Math Course cost is \$31.97

Many skills are required to successfully complete the electrical apprenticeship program and be able to function as a competent Journeyman. One such skill is the ability to apply standard mathematics in the classroom as well as on the job. The Tech Math course provides a review of necessary mathematical skills which are crucial to anyone working in the electrical trade. Topics include operations with whole numbers, integers, fractions, decimals, ratios, exponents, and units and measurements.

Reading Comprehension Course cost is \$10.87

Workplace reading skills are essential for success on the job. Reading to perform a task is required not just for job performance, but for worker safety. This course teaches you effective ways to capture the most important information within a text. You'll begin with an assessment that gauges your current ability to respond to questions about a technical passage. Then, you'll dive into best practices such as the SQ3R reading strategy, how to identify key components within a text, and how to effectively draw conclusions. You also will discover ways to connect to the text to establish deeper meaning, and eventually, how to apply the reading methods to working with math.

There is also an access fee for our LMS website. The pricing structure is below:

One-Week	7	\$3.71
Two-Week	14	\$7.42
One-Month	30	\$15.90
Three-Month	90	\$47.70
Six-Month	180	\$95.40

Price List was last updated 12/18/2024

Please contact the West Texas Electrical JATC if you want to be enrolled in either the reading comprehension or tech math course. The office number is 806-372-1581 or you can contact us by email at admin@wtxjatc.org.
