

INDUCTION CLAM SHELLS

Our induction heat clams shells are custom made to fit any application. We also utilize a new style of induction coil (the electric heater) set up for the ProHeat 35 Induction Heating System that focuses on pre-heating metal as it rotates. In addition, our induction heat clam shells offer a pre-heat treatment of up to 1200°F. Internal thermocouples can also be added to monitor to produce the units of temperature during the pipe's rotation.

KEY FEATURES:

- Uses Miller ProHeat 35
- Preheats up to 1200°F
- Custom made to fit your application
