

INTERNAL HEATING BLANKET

Thermal Tech & Temp's Internal Heating Blankets create a revolutionary way to internally heat metal pipes and vessels for exterior welding applications. The blanket features coils with sewn-on sleeves that hold the structure together, providing a skeleton-like support that ensures durability and reliability. Unlike traditional induction plug systems, our induction coils can be removed from the blanket and used for various applications.

To request an Internal Heating Blanket for your application, please scan the QR code provided above, and provide us with the dimensions and temperature requirements of your application.

KEY FEATURES:

- Lower Cost & More Efficient
- Removable Induction Coils for Use In Multiple Applications
- Multipurpose- Use Inside Piping or Flat
- Eliminates Bulky Induction Plugs
- Ideal for Pre-Heat and PWHT
