

USDD

United States Deflationary Dollar

Symbol: USDD
Max Supply: 1 Billion
Decimals: 6
Platform: Solana

Deployment Date:
June 5, 2025

Introduction & Market Problem

The United States Deflationary Dollar (USDD) is a fixed-supply, deflationary digital asset designed to counteract the inflationary shortcomings of fiat currencies. USDD is engineered for long-term value preservation, operating on the Solana blockchain with no minting capability, no transfer taxes, and an auto-deflationary burn model.

In a macroeconomic climate where fiat currencies consistently erode purchasing power, USDD provides a transparent, decentralized alternative designed for stability and self-custody. As central banks continue to inflate money supply, everyday consumers suffer the consequences through rising prices and stagnant wages.

Fiat currencies like the U.S. Dollar have lost more than 90% of their purchasing power over the last 100 years. USDD was designed to reverse that trajectory-embedding scarcity, transparency, and deflation at its core.

USDD presents a radical departure from inflation-based economic design. It offers a permanently capped supply of one billion tokens, no transfer taxation, and a liquidity burn system to create deflation over time.

The burn mechanism, powered by Raydium's Burn & Earn protocol, ensures that trading volume directly translates to supply reduction-amplifying scarcity as adoption grows.

Technology & Token Economics

Built on the Solana blockchain, USDD leverages a fast, low-cost, and scalable platform to facilitate global adoption. The token conforms to the SPL standard, allowing integration across decentralized exchanges, wallets, and DeFi tools.

USDD Tokenomics:

- Symbol: USDD
- Max Supply: 1 Billion
- Decimals: 6
- Transfer Tax: None (0%)
- Liquidity Pool Fee: 0.8% (Raydium Burn & Earn)

These mechanics are designed to reduce friction for holders, discourage speculative churn, and encourage long-term commitment.

Governance, Transparency & Community

USDD is non-custodial, community-aligned, and fully transparent. No central authority controls minting. At deployment, mint authority is revoked permanently and cannot be reinstated. All transactions, burns, and liquidity changes are verifiable via blockchain explorers.

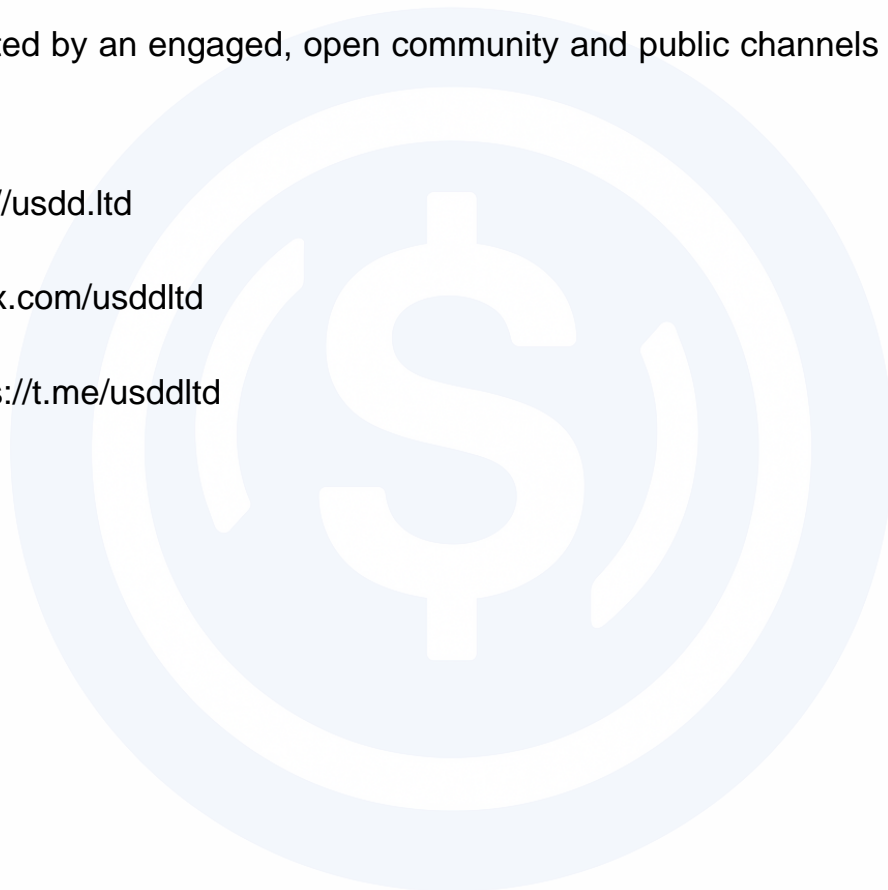

Deployment Date: June 5, 2025

Developer Wallet: 3YePLNHjyQ5xtP6vGgNpb2KWLzfGtBUHzF5dvr5WT8eb

Contract Address: TBA

USDD is supported by an engaged, open community and public channels of communication including:

- Twitter: <https://x.com/usddltd>
- Telegram: <https://t.me/usddltd>

Closing Statement

USDD is more than a token-it is a response to decades of inflation and wealth dilution. With a design that enshrines scarcity, autonomy, and value preservation, USDD offers a credible alternative to fiat for savers, investors, and digital citizens alike.

By embedding monetary discipline into its codebase and aligning incentives through burn mechanics, USDD is built to appreciate-not depreciate. It invites forward-thinking participants to store value with intention, not inflation.
