An account of a Dr. (M.D.) with a Predetermined Outcome and Personal Bias

BLUF: Dr. C.G. Moertel, M.D. at Mayo clinic when ATTEMPTING to replicate a process validating high doses of vitamin C administered through an IV and orally in the treatment of cancer, Dr. Moertel DID NOT use the IV process in his replication and OBVIOUSLY came up with different results. He claimed the previous study was not valid, WITHOUT ADMITTING HE CHANGED THE PROTOCOL, most likely to boost his credibility at Mayo. This is why extensive reading and research is important to your cancer fight.

Dr. C.G. Moertel DID NOT follow the protocols of the previous study, and therefore his results should have been dismissed by the Mayo Clinic as corrupted. There are recent studies and information high doses of vitamin C make an oxidant change in the body, and studies have shown that cancer cells CANNOT survive in high oxidant environment. So, the $60,000 question that should have been asked was, “Why did you deviate from the original trials, in your trials?”

In Dr. Leigh Erin Conneally book, *The Cancer Revolution,* she discusses research into Vitamin C dating back to the 1970s.

According to her research, “The vitamin C-hydrogen peroxide – catalase connection was first discovered by Dr. Mark Levine, an internationally acclaimed researcher at the NIH, who led a team of researchers to analyze the cancer-killing effects of high-dose vitamin C treatment. It was actually Noble Prize-winning scientist Dr. Linus Pauling[1], along with British cancer

surgeon Ewan Cameron, who were the first to discover and use vitamin C treatment for terminal cancer patients, in the 1970's.

In two published clinical trials, Drs. Pauling and Cameron reported that vitamin C significantly prolonged and improved their patients' quality of life. For these trials, Pauling and Cameron use mega-doses of 10 grams (10,000 mg) of IV vitamin C, followed by an additional 10 grams of oral vitamin C. **In later years, C.G. Moertel, MD, conducted controlled clinical studies at the Mayo Clinic and reported in the *New England Journal of Medicine* that he was unable to replicate the results of Drs. Pauling and Cameron." (**I put the text in bold to highlight the "conclusion" – BUT wait – the truth eventually comes out.)

Here is the rest of the story. "Dr. Levine, who discovered the vitamin C-hydrogen peroxide-catalase[2] connection, believed that Dr. Moertel's trials FAILED, because Dr. Moertel only gave his subjects vitamin C orally, while the research suggests dozens of grams of vitamin C must be given intravenously for it to work."

Recommendation: As you read various treatments and protocols, research the information. Do not take one article or opinion on such a serious disease. You must be your own doctor! © As you can read in the book I mentioned you can get the entire account. In the famous words of Rod Tidwell, from Jerry Magurie, "Show me the money!" I add, then "follow the money!"

[2] Catalase is a common enzyme found in nearly all living organisms exposed to oxygen which breaks down hydrogen peroxide to water and oxygen.
