- And much more!

Course Objectives:

Work-related musculoskeletal disorders (MSDs) result when there is a mismatch between the physical capacity of workers and the demands of the job. Musculoskeletal disorders are the leading cause of disability of people in their working years, afflicting over 19 million workers. One-half of the nation's work force is affected at some time during their working lives. Statistics show a steady increase in musculoskeletal disorders. Each year thousands of workers in the United States report work related MSDs such as tendonitis, epicondylitis, carpal tunnel syndrome, and back injuries. Many of these are

caused or aggravated by work related stressors such as lifting, reaching, pulling, pushing, and bending.

Learning Outcome:

Upon successful completion of this course, the student will be able to define ergonomics and work-related musculoskeletal disorders (MSD), recognize signs and symptoms of MSD injuries, identify risk factors for MSDs, specify controls and practices to eliminate and reduce risk factors and hazards, specify how to report symptoms and hazards, and identify the elements of a successful ergonomics program.
