Air Duct Cleaning for Commercial and Industrial Facilities

If it’s in your air, it’s in your equipment, products, employees and customers.

Mold, pollen, bacteria, and dust are common dwellers in dirty air ducts. Whether you have a manufacturing facility, office building, retail store, healthcare facility or other commercial or industrial property, Oregon Air Duct Cleaning takes facility maintenance burdens off your plate and works around your needs, so you can focus on running your business. For sensitive areas, we are trained in contamination containment and the unique requirements of healthcare, scientific, manufacturing, and other environments where meticulous care is demanded.

Before

After

Your customers and employees will thank you.

When your customers and employees breathe dust and pollen particles, they can suffer from itchy eyes, congested sinuses, compromised immune systems and lung inflammation. Individuals suffering from allergies and/or respiratory issues report immediate improvements in their overall health and comfort after having the air ducts cleaned. Clogged filters caused by dirty air ducts are taxing on your HVAC system, increase electricity costs and labor costs associated with facility cleaning.
Our Solution

**Agitation Tools**

We utilize a compressed air system for dust and debris agitation. Compressed air is gentler on your ducts and cleans them better than rotary based duct cleaning systems. Our Castair van mounted compressor system is regarded as the best in its class, able to achieve 43.6 cfm and 175 PSI ten hours a day, seven days a week.

**Portable Duct Vacuum**

The Revolution Hybrid, is no ordinary portable duct cleaning vacuum. The 220 Volt Hybrid Offers double the suction of most other portables, meaning you will get suction comparable to what many duct trucks are providing while getting all the advantages of a portable duct vacuum. The power of a duct truck in a vac the size of your coffee table.

**HEPA Filtration**

Sterling's HEPAPro 10 is a 2-horsepower HEPA vacuum equipped with an individually tested and certified HEPA Filter providing a minimum efficiency of 99.97% at .3 microns. It is a genuine HEPA vacuum that can be used for safe and efficient pick-up of hazardous materials including asbestos, lead, mold and crystalline silica.

**Duct Sanitation**

We utilize a Microbiostatic Sanitizing Agent fully approved by the EPA for use in HVAC systems. It is effective against bacteria, fungi, mold & mildew. It dries almost instantly on contact, providing a long term biostatic layer of protection. In conjunction with our Portable Duct Fogging System, we provide a safe and effective solution for sanitizing your ducts.
Who We Are

Local, Family Owned Business

From our headquarters in Wilsonville, Oregon we serve the commercial air duct cleaning needs of the entire state of Oregon and Southwest Washington. With a mission to provide customers with honest and trustworthy service, we strive to provide each customer with the best possible work when cleaning commercial, residential or industrial HVAC systems. Our technicians provide outstanding service by identifying and catering to each customer’s unique needs.

3 Companies Under the Same Roof

In addition to air duct cleaning, we provide a variety of commercial and residential cleaning services through our three brands. These services include, but are not limited to janitorial, high level disinfection, trauma cleanup, rodent decontamination, post construction cleanup, dust and dander remediation, hoarding restoration and odor removal.
