

Maximize IT System Availability with Managed Power Services

When You Have No Time for Downtime

90% of All Business Will Experience an Unexpected Power Failure*.

How prepared is your business for the inevitable?

No matter how advanced and automated your IT infrastructure gets, it still requires a reliable source of power to stay up and keep you productive. Every time your power fails and stops your operations, it costs you money, impairs your security and harms your reputation. We can now address a leading cause of downtime by monitoring your UPS (uninterruptible power supply) through Managed Power Services.

Benefits of Managed Power Services:

- Greatly reduce the chance of unplanned downtime
- Avoid the costs of lost employee productivity
- Help in-house IT staff focus on strategic initiatives
- Extend service life of the battery back-up
- Increase customer satisfaction and employee productivity

Managed Power Services reduce your risk of unplanned downtime. We ensure that you stay up, running, and productive by remotely monitoring your network's backup power 24/7, so you are free to focus on what matters most.
