- Day 1 – 26th July Program [LINK](#)
- Day 2 – 27th July Producer Day Program [LINK](#)

CANOLA TOXICITY

People have had a few issues this season grazing canola crops- full info [HERE](#) but the basics are:

- Can cause nitrate poisoning
- Fibre can sometimes be low
- Canola isn't very tasty, so low intake can trigger preg toxemia

Solution: slow introduction, supp hay, salt, lime, magnesium.

MARKING PRODUCTS

The new GlanEry 4in1 B12 is an attractive option this marking-essentially the combo of Glanvac and Euryvac in 1 needle, but doesn't include Selenium- no problem if you spread selenium on pastures.

Cost wise, its about 6cents more than using the two needles of Glanvac 3S and Euryvac.

Quotes we're pondering:

Tough times don't last...tough people do

If you are serious about change you have to go through uncomfortable situations. Stop trying to doge to process. IT'S THE ONLY WAY TO GROW.
