How To Get Started On Your Environmental Strategy

IoT-MFG Services-Pre

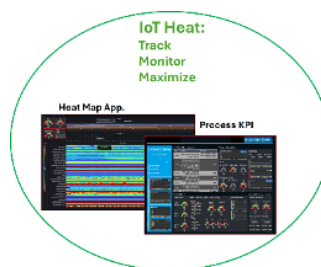

We can provide complete system wide audit services to your facility. Services include EPA permit review along with analysis of sewer system for missed opportunities such as Fiber Loss, Soda Loss. In addition, we can examine for Chemical feed rates, sludge analysis and all organic and inorganic data

IoT-MFG Flow

Most environmental systems have not been approached as a complete, holistic architecture, resulting in patches and quick fixes to most systems. It is not uncommon that sensor data is not connected (especially for remote areas of a facility). IoT-MFG has the expertise to connect your legacy equipment but also with our global partnerships, we can provide the correct sensors to give you a complete picture (on a real-time basis) of your Environmental System (from the sewers to the outfall).

IoT-MFG Heat

Insight and the ability to take immediate action within your Environmental system is the goal of IoT-MFG Heat modules. Our approach is to provide the right level of feedback and control

that you need. That could mean KPI's when all you need is tracking and monitoring or we can provide the ability to leverage full digital enhancements to maximize your ability to anticipate and control. This includes real-time alerts about impending compliance issues. The choice is yours.

IoT-MFG Services-Post

Once your end-to-end system is installed, IoT-MFG has the ability and expertise to maintain your system. We offer on-premises, monthly to quarterly site visits to ensure your system is running optimally and we are always looking for ways where you can further enhance your system.
