

Compter les animaux

MILLION WORD GAP PROJECT

L'apprentissage des animaux encourage les enfants à interagir avec les animaux. Communiquer et interagir avec les animaux développera leur cerveau et développera leur cœur. Un enfant qui aime les animaux peut explorer le monde en regardant les fourmis transporter de la nourriture, en observant les vers et les chenilles ramper sur le sol. Compter et reconnaître les animaux n'est pas seulement amusant ! C'est une merveilleuse façon d'aider leur cerveau à se développer, de les stimuler à réfléchir et de renforcer leur curiosité pour le monde dans lequel ils vivent.

Compter, c'est apprendre par écrit et mémoriser. Les enfants adorent compter et il est important de l'habituer aux chiffres, car ce sont les éléments constitutifs des mathématiques plus tard. Les enfants sont généralement capables de compter dans l'ordre de 1 à 10 avant de comprendre la signification de ces chiffres.
